### Part 2. How DNA controls the workings of the cell

Below are two partial sequences of DNA bases. Sequence 1 is from a human, and sequence 2 is from a cow. In both humans and cows, the sequence contains the gene to make the protein insulin. Insulin is necessary for the uptake of sugar from the blood. Without insulin, a person cannot digest sugars the same way others can, and they have a disease called diabetes.

Using the DNA sequence, make a complimentary mRNA strand for both the human and the cow. Write the mRNA directly below the DNA strand (remember to substitute Us for Ts in mRNA). Use a codon chart to determine what amino acids are assembled to make the insulin protein in both the cow and the human. Write your amino acid chain directly below the RNA sequence.
