Senk, Denise R. Thompson, 2020-07-24 The Curriculum and Evaluation Standards for School Mathematics published by the National Council of Teachers of Mathematics in 1989 set forth a broad vision of mathematical content and pedagogy for grades K 12 in the United States These Standards prompted the development of Standards based mathematics curricula What features characterize Standards based curricula How well do such curricula work To answer these questions the editors invited researchers who had investigated the implementation of 12 different Standards based mathematics curricula to describe the effects of these curricula on students learning and achievement and

to provide evidence for any claims they made In particular authors were asked to identify content on which performance of students using Standards based materials differed from that of students using more traditional materials and content on which performance of these two groups of students was virtually identical Additionally four scholars not involved with the development of any of the materials were invited to write critical commentaries on the work reported in the other chapters Section I of Standards Based School Mathematics Curricula provides a historical background to place the current curriculum reform efforts in perspective a summary of recent recommendations to reform school mathematics and a discussion of issues that arise when conducting research on student outcomes Sections II III and IV are devoted to research on mathematics curriculum projects for elementary middle and high schools respectively The final section is a commentary by Jeremy Kilpatrick Regents Professor of Mathematics Education at the University of Georgia on the research reported in this book It provides a historical perspective on the use of research to guide mathematics curriculum reform in schools and makes additional recommendations for further research In addition to the references provided at the end of each chapter other references about the Standards based curriculum projects are provided at the end of the book This volume is a valuable resource for all participants in discussions about school mathematics curricula including professors and graduate students interested in mathematics education curriculum development program evaluation or the history of education educational policy makers teachers parents principals and other school administrators The editors hope that the large body of empirical evidence and the thoughtful discussion of educational values found in this book will enable readers to engage in informed civil discourse about the goals and methods of school mathematics curricula and related research

Succeeding with Standards Judy F. Carr, Douglas E. Harris, 2001-04-15. In many schools and districts, the local curriculum is a hodgepodge of individual initiatives knit together by collective good intentions. **Succeeding with Standards: Linking Curriculum, Assessment, and Action Planning** describes a practical, school tested solution to the challenge of creating a curriculum. Building on their work in *How to Use Standards in the Classroom*, Judy F. Carr and Douglas E. Harris describe a comprehensive process by which schools and districts can turn piecemeal initiatives into a coherent plan. Carr and Harris draw on extensive experience with schools across the United States and groundbreaking work in Vermont to depict the standards linking process. They describe how to create a curriculum and assessment plan, define effective practice, create a comprehensive assessment system, map out a path to success through action planning. They also consider how to approach reporting results and professional development in a standards based environment. Improved student performance is the centerpiece of all these standards linking processes. Carr and Harris emphasize this point clearly, keeping **Standards Linking** in the context of bettering academic performance for all children. Plentiful figures and examples highlight Carr and Harris's insights and advice. An extensive glossary and helpful list of selected resources round out the volume.
