
Comprehensive Psychiatric Evaluation for Children

What is a comprehensive psychiatric evaluation?

A psychiatric evaluation helps diagnose emotional, behavioral, or developmental problems. It's done based on the child's behaviors. The behaviors are assessed as to how they are affecting the child's life.

When should a comprehensive psychiatric evaluation be sought?

Parents are often the first to suspect a problem in their child or teen. This includes problems with friends or family relationships, school, sleeping, eating, substance abuse and other aspects of daily life. If a problem is suspected, treatment should be sought out as soon as possible.

What is involved in a comprehensive psychiatric evaluation?

The following are the most common elements that make up a comprehensive, diagnostic psychiatric evaluation. However, each evaluation is different, as each child's symptoms and behaviors are different. A comprehensive evaluation may need several hours over one or more visits. It will include interviews with the child and parents or guardians. Evaluation may include:

- Description of behaviors present, for example:
 - When do the behaviors happen and how long does it last?
 - What are the conditions in which the behaviors most often happen?
 - How do the behaviors impact performance in school and other activities as well as relationships with others (for example, family, classmates, or teachers)?
 - What has been tried in the past to help the child's behaviors?
- Description of symptoms (physical and psychiatric symptoms)
- Personal and family history of emotional, behavioral, or developmental disorders
- Complete health history, including description of the child's overall physical health, list of any other illnesses or conditions present, and any treatments currently being given.
- Lab tests, in some cases (may be used to determine if an underlying medical condition is present), including:
 - Blood tests
 - Radiology studies to look for abnormalities, especially in the brain

Hoffman, 2012-12-06 This book which proposes a developmental view of short term inpatient treatment for severely disturbed children is much needed in our field It is particularly relevant emotionally engaging and a pleasure to read because the writers who are the actual participants and leaders in the milieu program discuss their own experiences with a variety of children The principles of milieu therapy are beautifully described and its application to a diverse ethnic population of sick children is clearly delineated I congratulate Leon Hoffman and his co workers for bringing to the field of child psychiatry a timely and helpful work Irving N Berlin M D Professor of Psychiatry and Pediatrics Director Division of Child and Adolescent Psychiatry and Director Children's Psychiatric Center University of New Mexico School of Medicine Albuquerque New Mexico

PREFACE Children who require hospital or residential treatment need an environment that provides a structure to their daily activities Much of the literature on milieu treatment is inadequate because of a lack of integration between the various theoretical frames of reference and their practical application Berlin has stressed the importance of a developmental frame of reference in the organization of a hospital child psychiatry unit The Mount Sinai Medical Center is a large urban institution located on the fringes of a New York City ghetto
