

PROTOCOL FOR: Pulse Oximeter

- POLICY:**
1. Pulse oximeters will be applied in the resuscitation room per Neonatal Resuscitation Program (NRP) guidelines.
 2. The pulse oximeter may be applied by NNEs in Newborn Nursery without an order when there are concerns about cyanosis, respiratory distress, or apnea/bradycardia.
 3. For infants in room air, set low limit at 90%. No upper limit is needed.
 4. For infants in supplemental oxygen, set low alarm limit at 90% unless otherwise ordered. No upper alarm limit is needed for infants > 33 weeks' corrected age.

- DESIRED PATIENT OUTCOMES:**
1. Spot checks using pulse oximetry will identify those infants at risk for oxygen desaturation in in a car seat and some infants with congenital heart disease.

- CLINICAL ASSESSMENT AND CARE:**
1. Cover probe to eliminate light exposure that may affect readings.
 2. Change probe site at least every 4 hours. More frequent changes are required if there are concerns about skin integrity.
 3. Apply probe and cover so that circulation is not restricted.
 4. Be aware of correlation between pulse oximeter readings and gases.
 5. Assess changes in oxygen saturation associated with activity and care.

- OXYGEN DELIVERY:**
1. Guidelines for adjusting the oxygen concentration:
 - a. Assess the SpO₂ tracing and the correlation of HR from pulse oximeter with HR from ECG.
 - b. If the infant is pink and without respiratory distress and pulse oximeter reads:
 - 1) LOW - evaluate oximeter and probe position. Movement, light or altered probe placement may produce poor signal and low readings.
 - c. Infant appears clinically normal and pulse oximeter is 1 to 2% outside alarm limits: Observe infant for 1 to 2 minutes while evaluating patient condition and oximeter function.

APPROVAL: Nursing Standards Committee

EFFECTIVE DATE: 8/92
