## **Psn Down For Maintenance May 2014:**

*Microcontroller Engineering with MSP432* Ying Bai, 2016-11-03 This book aims to develop professional and practical microcontroller applications in the ARM MDK environment with Texas Instruments MSP432P401R LaunchPad kits. It introduces ARM Cortex M4 MCU by highlighting the most important elements including registers, pipelines, memory, and I/O ports. With the updated MSP432P401R Evaluation Board EVB MSP EXP432P401R, this MCU provides various control functions with multiple peripherals to enable users to develop and build various modern control projects with rich control strategies. Microcontroller programming is approached with basic and straightforward programming codes to reduce learning curves and furthermore to enable students to build embedded applications in more efficient and interesting ways. For authentic examples, 37 class programming projects are built into the book that use MSP432P401R MCU. Additionally, approximately 40 lab programming projects with MSP432P401R MCU are included to be assigned as homework.

**Research Objects in their Technological Setting** Bernadette Bensaude Vincent, Sacha Loeve, Alfred Nordmann, Astrid Schwarz, 2017-02-24 What kind of stuff is the world made of? What is the nature or substance of things? These are ontological questions and they are usually answered with respect to the objects of science. The objects of technoscience tell a different story that concerns the power, promise, and potential of things, not what they are but what they can be. Seventeen scholars from history and philosophy of science, epistemology, social anthropology, cultural studies, and ethics each explore a research object in its technological setting, ranging from carbon to cardboard, from arctic ice cores to nuclear waste, from wetlands to GMO seeds, from fuel cells to the great Pacific garbage patch. Together, they offer fascinating stories and novel analytic concepts, all the while opening up a space for reflecting on the specific character of technoscientific objects. With their promise of sustainable innovation and a technologically transformed future, these objects are highly charged with values and design expectations. By clarifying their mode of existence, we are learning to come to terms more generally with the furniture of the technoscientific world, where, for example, the dead matter of classical physics is becoming the smart material of emerging and converging technologies.
