

Psych Exam 1 Study Guide

What is psychology?

- **Psychology**- a science that seeks answers to age-old questions about why people think, feel, and act as they do, aiming to separate unformed opinions from examined conclusions.

Applied vs Basic Research

- **Basic**: understand process and reasons/attempt to answer questions about behavior
- **Applied**: conducted to address practical problems/ useful solutions within a few years

"CAN'T HAVE APPLIED RESEARCH IF YOU DON'T HAVE BASIC"

Scientific Methods and Research Designs:

Case Study: a descriptive research technique in which one individual or group is studied in depth in the hope of revealing universal principles; describes behavior

Correlational: indicates how closely two things vary together, and thus how well either one predicts the other

- A **positive correlation** (above 0 to +1.00) indicates a **direct relationship**, meaning that two things increase together or decrease together. For example, height and weight are **positively correlated**.
- A **negative correlation** (below 0 to -1.00) indicates an **inverse relationship**: As one thing increases, the other decreases. The weekly number of hours spent in TV watching and video gaming correlates negatively with grades.

Experimental: powerful form of investigation that allows researchers to draw conclusions about **cause and effect relationships** between different factors; independent variable, dependent variable, controlled and cause and effect relationships

Naturalistic Observation: observing and recording behavior in naturally occurring situations without trying to manipulate and control the situation; describes behaviors with no explanation

Survey: self-reports in which people answer questions about their behavior or attitudes

Theory: help us explain and predict behavior by offering ideas that organize what we have observed

- Tentative explanation
- A whole body of research
