**Abstract**—The purpose of this study was to determine the effect of a 10-week training program on the heart rate (HR) and energy expenditure (EE) of sedentary, middle-aged women. The subjects were 15 women, 40 to 50 years of age, who were sedentary and had no cardiovascular or other medical problems. The subjects were randomly assigned to a 10-week training program or a control group. The training program consisted of three sessions per week of aerobic exercise at 60% of maximum HR. The control group did not exercise. The subjects were monitored for HR and EE at baseline and at the end of the 10-week program. The results showed that the training program had a significant effect on HR and EE. The HR of the training group decreased significantly from baseline to the end of the 10-week program, while the HR of the control group remained unchanged. The EE of the training group increased significantly from baseline to the end of the 10-week program, while the EE of the control group remained unchanged. The results of this study suggest that a 10-week training program can improve the cardiovascular fitness of sedentary, middle-aged women.

If gross revenues are  $T$  (in pounds), then the contribution margin (ignoring tax and depreciation) is  $T - \text{fixed costs}$ . If the contribution margin is  $Q$  (in £), then the contribution margin ratio is  $Q/T$  (in %).

- Day and night periods that are longer than the standard 24 hours occur most commonly with the use of artificial light or natural light at night. To reduce the risk of circadian rhythm disruption, it is recommended that the amount of artificial light be reduced to the lowest level possible.
- Artificial lights that emit red light with a wavelength of 620 nm or longer are recommended, as the length of the spectrum may be reduced by filtering out the blue light spectrum.
- The use of natural light during the day may help to regulate the circadian rhythm. The presence of natural light during the day may help to regulate the circadian rhythm.
- Natural light is not recommended for the use of artificial light.

- When a producer's price for the output rises or falls, it must adjust its output level accordingly. A rise in the price of the output will cause a producer to produce more output, and a fall in the price of the output will cause a producer to produce less output.
