Herrera, Ralph Garcia-Bertrand, Francisco M. Salzano, 2016-03-01 This book combines recent information and discoveries in the field of human molecular biology and human molecular evolution It provides an interdisciplinary approach drawing together data from various diverse disciplines to address both the more classical anthropological content and the current more contemporary molecular focus of courses Chapters include a history of human evolutionary genetics the human genome structure and function population structure and variability gene and genomic dynamics culture health and disease bioethics future Selected Water Resources Abstracts, 1980 **Human Evolution**

beyond Biology and Culture Jeroen C. J. M. van den Bergh, 2018-10-18 Both natural and cultural selection played an important role in shaping human evolution. Since cultural change can itself be regarded as evolutionary, a process of gene-culture coevolution is operative. The study of human evolution in past, present, and future is therefore not restricted to biology. An inclusive comprehension of human evolution relies on integrating insights about cultural, economic, and technological evolution with relevant elements of evolutionary biology. In addition, proximate causes and effects of cultures need to be added to the picture, issues which are at the forefront of social sciences like anthropology, economics, geography, and innovation studies. This book highlights discussions on the many topics to which such generalised evolutionary thought has been applied: the arts, the brain, climate change, cooking, criminality, environmental problems, futurism, gender issues, group processes, humour, industrial dynamics, institutions, languages, medicine, music, psychology, public policy, religion, sex, sociality, and sports.
