Analytical Methods For Geochemical Exploration J. C. Van Loon, R. R. Barefoot, 2013-10-22 Written for the practicing analyst Analytical Methods for Geochemical Exploration offers thoroughly tested chemical analysis methods for determining what base or precious metals are in geochemical exploration samples such as rocks soil or sediment Theory is kept to a minimum and complete procedures are provided so that no additional sources are needed to conduct analyses Advanced Glasses, Composites and Ceramics for High Growth Industries Milena Salvo, Mike Reece, Aldo R. Boccaccini, 2019-05-24 Advanced Glasses Composites and Ceramics for High Growth Industries CoACH was a European Training Network ETN project http www coach etn eu funded by the Horizon 2020 program CoACH involved multiple actors in the innovation ecosystem for advanced materials composed of five universities and ten enterprises in seven different European countries The project studied the next generation of materials that could bring innovation in the healthcare construction and energy sectors among others from new bioactive glasses for bone implants to eco friendly cements and new environmentally friendly thermoelectrics for energy conversion The novel materials developed in the CoACH project pave the way for innovative products improved cost competitiveness and positive environmental impact The present Special Issue contains 14 papers resulting from the CoACH project showcasing the breadth of materials and processes developed during LIMS Richard Mahaffey, 2012-12-06 Computing and information management technologies touch our lives in the project the environments where we live play and work High tech is becoming the standard Those of use who work in a laboratory environment are faced with an obvious challenge How do we best apply these technol ogies to make money for our companies The first level of deliverable benefits is achieved through task automation The second level is ob tained by integrating the individual islands of automation The third or top level of benefits is related to applying intelligence to computing applications The use of computing technology at level one to automate lab pro cedures methods and instruments has been profitable for many years We can easily find yearly returns in the range of 10 50% for investments at this level For level two the integration of some applications has evolved and has led to data management systems and local area net working in the lab environment Investment paybacks at level two are substantially higher in the range of 200 400% Examples of applications at the top level that of intelligent systems and applications are few and far between And what about the payback for investments at this level With such limited experience at level three we can only estimate the benefits But again Freeze-Drying of Pharmaceutical and Food Products they appear to be much higher in the range of 2000 4000% Tse-Chao Hua, Bao-Lin Liu, Haimei Zhang, 2010-07-30 Freeze drying is an important preservation technique for heat sensitive pharmaceuticals and foods Products are first frozen then dried in a vacuum at low temperature by sublimation and desorption rather than by the application of heat The resulting items can be stored at room temperature for long periods This informative text addresses both principles and practice in this area The first chapter introduces freeze drying The authors

then review the fundamentals of the technique heat mass transfer analyses modelling of the drying process and the equipment employed Further chapters focus on freeze drying of food freeze drying of pharmaceuticals and the protective agents and additives applied The final chapter covers the important subjects of disinfection sterilization and process validation Freeze drying of pharmaceutical and food products is an essential reference for food pharmaceutical and refrigeration engineers and scientists with an interest in preservation techniques It will also be of use to students in these fields Addresses the principles and practices used in this important preservation technique Explains the fundamentals of heat mass transfer analysis modelling and the equipment used Discusses the importance of disinfection sterilization and process validation Toxicological Evaluation of Chemical Interactions ,1994 Environmental Health Perspectives ,1993
