Plant Life Cycles

FROM SEED TO TREE

Every plant begins its life as a tiny seed. The seed contains all the information it needs to grow into a mature plant. When the seed is planted in the soil, it begins to grow. The first stage is germination, where the seed absorbs water and nutrients from the soil. The seed then grows into a seedling, which has two small leaves. The seedling grows into a sapling, which has a single large leaf. The sapling grows into a tree, which has many large leaves and a thick trunk. The tree then produces more seeds, which can be planted in the soil to start the cycle again.

Plants Through Seasons

Plants grow and change throughout the year. In the spring, the plants begin to grow and produce new leaves. In the summer, the plants are in full bloom and produce many seeds. In the fall, the plants begin to die and their leaves turn brown. In the winter, the plants are dormant and do not grow.
