Kimbel, Lawrence B. Martin, 2013-12-18 A world of categories devmd of spirit waits for life to return Saul Bellow Humboldt's Gift The stock in trade of communicating hypotheses about the historical path

of evolution is a graphical representation called a phylogenetic tree. In most such graphics pairs of branches diverge from other branches successively marching across abstract time toward the present. To each branch is tied a tag with a name, a binominal symbol that functions as does the name given to an individual human being. On phylogenetic trees the names symbolize species. What exactly do these names signify? What kind of information is communicated when we claim to have knowledge of the following types: *Tetodonius mathewzi* was ancestral to *Pseudotetodonius ambiguus*. The sample of fossils attributed to *Homo habilis* is too variable to contain only one species. Interbreeding populations of savanna baboons all belong to *Papio anubis*. *Hylobates lar* and *H. pileatus* interbreed in zones of geographic overlap. While there is nearly universal agreement that the notion of the species is fundamental to our understanding of how evolution works, there is a very wide range of opinion on the conceptual content and meaning of such particular statements regarding species. This is because, oddly enough, evolutionary biologists are quite far from agreement on what a species is, how it attains this status, and what role it plays in evolution over the long term. Human By Nature Peter Weingart, Sandra D. Mitchell, Peter J. Richerson, Sabine Maasen, 2013-06-17. Representing a wide range of disciplines: biology, sociology, anthropology, economics, human ethology, psychology, primatology, history, and philosophy of science, the contributors to this book recently spent a complete academic year at the Center for Interdisciplinary Research (ZiF) discussing a plethora of new insights in reference to human cultural evolution. These scholars acted as a living experiment of interdisciplinarity in vivo. The assumption of this experiment was that the scholars, while working and residing at the ZiF, would be united intellectually as well as socially, a connection that might eventually enhance future interdisciplinary communication even after the research group had dispersed. An important consensus emerged: The issue of human culture poses a challenge to the division of the world into the realms of the natural and the cultural, and hence to the disciplinary division of scientific labor. The appropriate place for the study of human culture in this group's view is located between biology and the social sciences. Explicitly avoiding biological and sociological reductionisms, the group adopted a pluralistic perspective: integrative pluralism that took into account both today's highly specialized and effective subdisciplinary research and the possibility of integrating the respective findings on a case-by-case basis. Each sub group discovered its own way of interdisciplinary collaboration and submitted a contribution to the present volume reflecting one of several types of fruitful cooperation, such as a fully integrated chapter, a multidisciplinary overview, or a discussion between

different approaches A promising first step on the long road to an interdisciplinarily informed understanding of human culture this book will be of interest to social scientists and biologists alike *Evidential Statistics, Model Identification, and Science* Mark Louis Taper, Jose Miguel Ponciano, Yukihiro Toquenaga, Hidetoshi Shimodaira, 2022-02-15 **Environmental and Occupational Medicine** William N.
