**Machine Learning Applications for Sustainable Development** A. J. Singh,Nikita Gupta,Sanjay Kumar,Sumit

Sharma,Subho Upadhyay,Sandeep Kumar,2025-01-28 The book highlights how technologies including artificial intelligence and machine learning are transforming renewable energy technologies and enabling the development of new solutions It further discusses how smart technologies are employed to optimize energy production and storage enhance energy efficiency and improve the overall sustainability of energy systems This book Discusses artificial intelligence based techniques namely neural networks fuzzy expert systems optimization techniques and operational research Showcases the importance of artificial intelligence and machine learning in the energy market demand analysis and forecasting of renewable energy applications Illustrates strategies for sustainable development using artificial intelligence and machine learning applications Presents applications of artificial intelligence in the domain of electronics transformation and development smart cities and renewable energy utilization Highlights the role of artificial intelligence in solving problems such as image and signal processing smart weather monitoring smart farming and distributed energy sources It is primarily written for senior undergraduates graduate students and academic researchers in diverse fields including electrical electronics and communications energy and environmental engineering

Renewable Energy Resources and Conservation Philip

Pong,2024-07-05 This book offers a comprehensive overview of state of the art research and development in diverse areas of

renewable energy including renewable energy storage conservation solar wind biomass nuclear geothermal and renewable energy systems It is a valuable resource for anyone interested in gaining insight into the latest advancements in renewable energy technologies and their applications The book chapters present selected high quality research from the 8th International Conference on Renewable Energy and Conservation ICREC 2023 that analyze the latest trends and present case studies Renewable Energy Resources and Conservation offers researchers practitioners professionals and scientists working in renewable energy engineering a host of authoritative ideas and insights into renewable energy grid infrastructures engineering design methods technologies and best practices to address industrial challenges

*Intelligent Learning Approaches for Renewable and Sustainable Energy* Josep M. Guerrero, Pankaj Gupta, Ritu Kandari, Alexander Micallef, 2024-02-21 Intelligent Learning Approaches for Renewable and Sustainable Energy provides a practical systematic overview of the application of advanced intelligent control techniques adaptive techniques machine learning algorithms and predictive control in renewable and sustainable energy The book begins by introducing the intelligent learning approaches and the roles of artificial intelligence and machine learning in terms of energy and sustainability grid transformation large scale integration of renewable energy and variability and flexibility of renewable sources The second section of the book provides detailed coverage of intelligent learning techniques as applied to key areas of renewable and sustainable energy including forecasting supply and demand integration energy management and optimization supported by case studies figures schematics and references This is a useful resource for researchers scientists advanced students energy engineers R D professionals and other industrial personnel with an interest in sustainable energy and integration of renewable energy sources energy systems energy engineering machine learning and artificial intelligence Explores cutting edge intelligent techniques and their implications for future energy systems development Opens the door to a range of applications across forecasting supply and demand energy management optimization and more Includes a range of case studies that provide insights into the challenges and solutions in real world applications

**Deep Reinforcement Learning-based Energy Management for Hybrid Electric Vehicles** Yeuching Li, Hongwen He, 2022-02-14 The urgent need for vehicle electrification and improvement in fuel efficiency has gained increasing attention worldwide Regarding this concern the solution of hybrid vehicle systems has proven its value from academic research and industry applications where energy management plays a key role in taking full advantage of hybrid electric vehicles HEVs There are many well established energy management approaches ranging from rules based strategies to optimization based methods that can provide diverse options to achieve higher fuel economy performance However the research scope for energy management is still expanding with the development of intelligent transportation systems and the improvement in onboard sensing and computing resources Owing to the boom in machine learning especially deep learning and deep reinforcement learning DRL research on learning based energy management strategies EMSs is gradually gaining more momentum They have shown great promise in

not only being capable of dealing with big data but also in generalizing previously learned rules to new scenarios without complex manually tuning Focusing on learning based energy management with DRL as the core this book begins with an introduction to the background of DRL in HEV energy management The strengths and limitations of typical DRL based EMSs are identified according to the types of state space and action space in energy management Accordingly value based policy gradient based and hybrid action space oriented energy management methods via DRL are discussed respectively Finally a general online integration scheme for DRL based EMS is described to bridge the gap between strategy learning in the simulator and strategy deployment on the vehicle controller      Big Data Application in Power Systems Reza

Arghandeh,Yuxun Zhou,2024-07-01 Big Data Application in Power Systems Second Edition presents a thorough update of the previous volume providing readers with step by step guidance in big data analytics utilization for power system diagnostics operation and control Bringing back a team of global experts and drawing on fresh emerging perspectives this book provides cutting edge advice for meeting today s challenges in this rapidly accelerating area of power engineering Divided into three parts this book begins by breaking down the big picture for electric utilities before zooming in to examine theoretical problems and solutions in detail Finally the third section provides case studies and applications demonstrating solution troubleshooting and design from a variety of perspectives and for a range of technologies Readers will develop new strategies and techniques for leveraging data towards real world outcomes Including five brand new chapters on emerging technological solutions Big Data Application in Power Systems Second Edition remains an essential resource for the reader aiming to utilize the potential of big data in the power systems of the future Provides a total refresh to include the most up to date research developments and challenges Focuses on practical techniques including rapidly modernizing monitoring systems measurement data availability big data handling and machine learning approaches for processing high dimensional heterogeneous and spatiotemporal data Engages with cross disciplinary lessons drawing on the impact of intersectional technology including statistics computer science and bioinformatics Includes five brand new chapters on hot topics ranging from uncertainty decision making to features selection methods and the opportunities provided by social network data

*Civil and Environmental Engineering for Resilient, Smart and Sustainable Solutions* Tahar Ayadat,2025-03-25 The book focusses on recent developments in the area of infrastructures that are resilient smart and sustainable It presents an important guideline for policy makers engineers and researchers interested in various infrastructure issues faced by societies Keywords Earthquakes Damage Localization Global Warming Machine Learning Seismic Assessment Reinforced Concrete Fire Behavior Shape Memory Alloys Green Sustainable Concrete Geotechnical Parameters Cement Paste Plasticity Index Urban Environment Underground Pipeline Soil Stabilization Groundwater Monitoring Solar Photovoltaic Systems Climate Change Pollution Monitoring Cost Estimation Model      *Handbook of Power Electronics in Autonomous and Electric Vehicles* Muhammad H.
