Extruding Plastics D.V. Rosato, 2013-11-27 Worldwide extrusion lines successfully process more plastics into products than other processes by consuming at least 36 wt% of all plastics. They continue to find practical solutions for new products and or problems to meet new product performances. This book with its practical industry reviews is a unique handbook the first of its kind that covers over a thousand of the potential combinations of basic variables or problems with solutions that can occur from upstream to downstream equipment. Guidelines are provided for maximizing processing efficiency and operating at the lowest possible cost. It has been prepared with an awareness that its usefulness will depend greatly upon its simplicity and provision of essential information. It should be useful to 0 those already extruding and desiring to obtain additional information for their line and or provide a means of reviewing other lines that can provide their line with operating improvements 2 those processing or extruding plastics for the first time 3 those considering going into another extrusion process 4 those desiring additional information about employing the design of various products more efficiently with respect to both performance and cost 5 those contemplating entering the business of extrusion 6 those in new venture groups materials development and or market development 7 those in disciplines such as nonplastics manufacturers engineers designers quality control financial and management and 8 those requiring a textbook on extrusion in trade schools and high schools or colleges
