Earth and Space Science ,1971 *Space Science: Teacher's ed* ,2005 **Modern Space Science** Frederick E. Trinklein, Charles Morse Huffer, 1961 *Research in Education* ,1971 Plato's Sun Andrew Lawless, 2005-12-15 Writing an introductory text for philosophy is an exceedingly difficult task The discipline has spent a century or more in existential crisis with the attack on metaphysics dating back at least to Nietzsche and carried forward in different ways by Heidegger Wittgenstein and Derrida to name a few This constant upheaval has precipitated a climate of self doubt that goes to the core of philosophy the result being a strange discipline with many of its most illustrious names proudly announcing its demise In Plato's Sun Andrew Lawless takes on the challenge of creating an introductory text for philosophy arguing that such a work has to take into account of the strangeness of the field and divulge it rather than suppress it beneath traditional certainties and authoritative pronouncements Lawless writes within the shadow of post modern anti metaphysical skepticism introducing some of the principal areas of philosophy metaphysics epistemology logic ethics and language Lawless's concern is not to resolve the issues he raises so much as to set them out in a way that lets the reader experience something of the philosopher's struggle In so doing Lawless holds fast to the Socratic vision of philosophy as a process of inquiry that values questions above answers pushing the inquirer beyond his or her answers With numerous pedagogical features including glossaries of names and key terms suggested readings and short chapter summaries Plato's Sun will be an essential text to new students of philosophy and an important aid in teaching the subject **Resources in Education** ,1989 *Intellectual Stimulation of Gifted Pupils in Small Secondary Schools Through Televised Instruction* Maine. ultimately leads us back to a more productive path in our quest for understanding This approach also points out why as a broadly educated citizenry students of all disciplines must understand how scientists arrive at conclusions and how science and technology have become central features of modern society In discussing this fascinating and beautiful universe of which we are a part it is necessary to illustrate the fundamental role that mathematics plays in decoding nature s mysteries Unlike other similar textbooks some basic mathematics is integrated naturally into the text together with interpretive language and supplemented with numerous examples additional tutorials are provided on the book s companion website Astronomy The Human Quest for Understanding leads the reader down the path to our present day understanding of our Solar System stars galaxies and the beginning and evolution of our universe along with profound questions still to be answered in this ancient yet rapidly changing field
