Improving Outcomes in Diabetic Foot Care - A Worldwide Perspective Richard Paisey, José Luis Lázaro Martínez, Joanne Paton, Frances Game , Honda Hsu, 2024-11-11 Enhanced population longevity decrease in physical activity

and the obesity pandemic have resulted in an increase in incidence of type 2 diabetes in all WHO health care areas. The prevalence of the condition has been further increased by an increase in life expectancy of those living with both type 1 and type 2 diabetes as a result of lifestyle and therapeutic interventions. Microvascular complications of type 1 and type 2 diabetes mellitus are related to duration of the condition and include neuropathy in 20% of cases in all cultures. Diabetic peripheral neuropathy in combination with propensity to distal peripheral vascular disease, poor healing, infection, and foot deformities often result in foot ulceration and a uniquely high minor and major amputation risk. The risk for foot ulceration is modified by ethnicity, foot flexibility, and life style, footwear, and culture of walking bare foot. Once a deep diabetic foot ulcer has developed, the epidermis, dermis, tendon insertions, and bone architecture will never return to normal. The lack of resilience in the scar tissue formed and foot deformity after a deep ulcer will confer a high risk of re-ulceration. In fact, previous foot ulceration is by far the highest risk factor for occurrence of a foot wound in persons living with diabetes.

Zaiane, Simeon Simoff, Chabane

Djeraba,2003-10-23 1 Workshop Theme Digital multimedia differs from previous forms of combined media in that the bits that represent text, images, animations, and audio, video, and other signals can be treated as data by computer programs. One facet of this diverse data in terms of underlying models and formats is that it is synchronized and integrated; hence it can be treated as integral data records. Such records can be found in a number of areas of human endeavour. Modern medicine generates huge amounts of such digital data. Another ample is architectural design and the related architecture, engineering, and construction (AEC) industry. Virtual communities in the broad sense of this word, which includes any communities mediated by digital technologies, are another example where generated data constitutes an integral data record. Such data may include data about member profiles, the content generated by the virtual community, and communication data in different formats, including e-mail, chat records, SMS messages, videoconferencing records. Not all multimedia data is so diverse. An example of less

diverse data but data that is larger in terms of the collected amount is that generated by video surveillance systems where each integral data record roughly consists of a set of time stamped images the video frames In any case the collection of such in gral data records constitutes a multimedia data set The challenge of extracting meaningful patterns from such data sets has led to the research and develo ment in the area of multimedia data mining *Global Dermatology and Telemedicine, An Issue of Dermatologic Clinics* , *E-Book* Victoria Williams, Carrie Kovarik, 2020-12-04 This issue of Dermatologic Clinics guest edited by Drs Victoria Williams and Carrie Kovarik will cover a number of important topics in Global Dermatology and Telemedicine This issue is one of four each year selected by long time series Consulting Editor Dr Bruce Thiers Topics discussion include but are not limited to Patterns of Skin Disease in the Context of a High Prevalence HIV Population in Botswana Telemedicine and Community Health Projects in Asia Utilizing Technology for Dermatology Care in Tajikistan A Health Systems Perspective Community Outreach Projects to Increase Dermatology Education and Access to Care in Argentina Challenges and Successes of Dermatology Training Programs in Africa Developing an Electronic Platform for Global Dermatology Mentorship and Collaboration Novel Diagnostics for Kaposi Sarcoma and Other Skin Diseases in Resource Poor Settings Implementing a Locally Made Low Cost Intervention for Wound and Lymphedema Care in Western Kenya Challenges of Managing Skin Disease in Migrants and Refugees Factors Affecting Quality of Life for People Living with Albinism in Botswana and Integration of Management Strategies for Neglected Tropical Diseases Affecting the Skin
