

## SCN60 User's Manual

### Location Recommendations:

The machine can be built into a cabinet. It is an air cooled refrigeration system and so air flows in and out of it through the grill at the bottom front. The grill must not be blocked by any covering door or other obstruction.

There are two models, one is a gravity drain type and it must have a building drain connection below the level of the drain tube at the back of the cabinet; the other is a pump drain model which can force drain water up a maximum of 10 feet, allowing it to be located where a gravity drain isn't available.

**Kickplate Extension:** In some situations the leg levelers will be extended enough to become visible. A kit to extend the kickplate over the legs is **KKPF**.

**Cabinet Stability:** In some free standing installations it may be prudent to add a bracket that secures the back of the cabinet to a wall. That kit number is **KATB**.

**Drain Conversion:** A gravity drain model can be converted to a drain pump model by installing a drain pump kit. The drain pump kit consists of a drain pump, wiring harness and associated tubing. The part number is **A39462-021**.

### Installation Notes

**Built In Situations:** If a finished floor is to be installed in the area after the ice machine has been built in, shims the expected thickness of the floor should be installed under the unit to keep the machine level with the planned floor level.

---

**Note:** The water connection is at the back and adds a few inches to the cabinet depth.

---

**Installations on a slab:** Use a pump model and pump the water to the point of drainage. Pump models will pump 1 story (10 feet) high.

**Installations over a crawl space or basement:**

Either gravity drain or pump model units may be used; if there is not enough room behind the machine for a drain/waste receptacle, the drain will have to be below the floor.

---

**Note:** When installed in a corner, the door swing may be limited due to handle contact with the wall or cabinet face.

---

All models require a water supply. Water supplies vary in the degree of mineral content. High mineral content water will require more frequent maintenance. Water filtration may improve the taste of the ice as well as cut down on some of the mineral build up.
