Scope Of Life Science November 2014:

Towards an embodied science of intersubjectivity: Widening the scope of social understanding research

Ezequiel Di Paolo, Hanne De Jaegher, 2015-06-16 An important amount of research effort in psychology and neuroscience over the past decades has focused on the problem of social cognition. This problem is understood as how we figure out other minds relying only on indirect manifestations of other people's intentional states which are assumed to be hidden, private and internal. Research on this question has mostly investigated how individual cognitive mechanisms achieve this task. A shift in the internalist assumptions regarding intentional states has expanded the research focus with hypotheses that explore the role of interactive phenomena and interpersonal histories and their implications for understanding individual cognitive processes. This interactive expansion of the conceptual and methodological toolkit for investigating social cognition we now propose can be followed by an expansion into wider and deeply related research questions beyond but including that of social cognition narrowly construed. Our social lives are populated by different kinds of cognitive and affective phenomena that are related to but not exhausted by the question of how we figure out other minds. These phenomena include acting and perceiving together, verbal and non-verbal engagement, experiences of disconnection, management of relations in a group, joint meaning making, intimacy, trust, conflict, negotiation, asymmetric relations, material mediation of social interaction, collective action, contextual engagement with socio-cultural norms, structures and roles etc. These phenomena are often characterized by a strong participation by the cognitive agent in contrast with the spectatorial stance typical of social cognition research. We use the broader notion of embodied intersubjectivity to refer to this wider set of phenomena. This Research Topic aims to investigate relations between these different issues to help lay strong foundations for a science of intersubjectivity, the social mind writ large. To contribute to this goal we encouraged contributions in psychology, neuroscience, psychopathology, philosophy and cognitive science that address this wider scope of intersubjectivity by extending the range of explanatory factors from purely individual to interactive, from observational to participatory. *The Global Practice of Forensic Science* Douglas H. Appropriations for 2016 United States. Congress. House. Committee on Appropriations. Subcommittee on Energy and Water Development,2015 **Science and Religion** Yves Gingras,2017-06-16 Today we hear renewed calls for a dialogue

between science and religion why has the old question of the relations between science and religion now returned to the public domain and what is at stake in this debate To answer these questions historian and sociologist of science Yves Gingras

retraces the long history of the troubled relationship between science and religion from the condemnation of Galileo for heresy in 1633 until his rehabilitation by John Paul II in 1992. He reconstructs the process of the gradual separation of science from theology and religion showing how God and natural theology became marginalized in the scientific field in the eighteenth and nineteenth centuries. In contrast to the dominant trend among historians of science, Gingras argues that science and religion are social institutions that give rise to incompatible ways of knowing rooted in different methodologies and forms of knowledge and that there never was and cannot be a genuine dialogue between them. Wide ranging and authoritative, this new book on one of the fundamental questions of Western thought will be of great interest to students and scholars of the history of science and of religion as well as to general readers who are intrigued by the new and much publicized conversations about the alleged links between science and religion.

Life, Re-Scaled Liliane Campos, Pierre-Louis Patoine, 2022-10-11. This edited volume explores new engagements with the life sciences in contemporary fiction, poetry, comics, and performance. The gathered case studies investigate how recent creative work reframes the human within microscopic or macroscopic scales from cellular biology to systems ecology and engages with the ethical, philosophical, and political issues raised by the twenty-first century's shifting views of life. The collection thus examines literature and performance as spaces that shape our contemporary biological imagination. Comprised of thirteen chapters by an international group of academics, *Life Re-Scaled: The Biological Imagination in Twenty-First Century Literature and Performance* engages with four main areas of biological study: Invisible scales, cells, microbes, and mycelium; Neuro medical imaging and diagnosis; Pandemic imaginaries; and Ecological scales. The authors examine these concepts in emerging forms such as plant theatre, climate change art, ecofiction, and pandemic fiction, including the work of Jeff Vandermeer, Jon McGregor, Jeff Lemire, and Extinction Rebellion's Red Rebel Brigade performances. This valuable resource moves beyond the biological paradigms that were central to the nineteenth and twentieth centuries to outline the specificity of a contemporary imagination. *Life Re-Scaled* is crucial reading for academics, scholars, and authors alike as it proposes an unprecedented overview of the relationship between literature, performance, and the life sciences in the twenty-first century.
