Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles National Research Council, Division on Engineering and Physical Sciences, Board on Energy and Environmental Systems, Committee on the Assessment of Technologies for Improving Fuel Economy of Light-Duty Vehicles, Phase 2, 2015-09-28 The light duty vehicle fleet is expected to undergo substantial technological changes over the next several decades New powertrain designs alternative fuels advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards By the end of the next decade cars and light duty trucks will be more fuel efficient weigh less emit less air pollutants have more safety features and will be more expensive to purchase relative to current vehicles Though the gasoline powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030 such vehicles will be equipped with advanced technologies materials electronics and controls and aerodynamics And by 2030 the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation including autonomous vehicles will be well underway What are these new technologies how will they work and will some technologies be more effective than others Written to inform The United States Department of Transportation s National Highway Traffic Safety Administration NHTSA and Environmental Protection Agency EPA Corporate Average Fuel Economy CAFE and greenhouse gas GHG emission standards this new report from the National Research Council is a technical evaluation of costs benefits and implementation issues of fuel reduction technologies for next generation light duty vehicles *Cost Effectiveness and Deployment of Fuel Economy Technologies for Light Duty Vehicles* estimates the cost potential efficiency improvements and barriers to commercial deployment of technologies that might be employed from 2020 to 2030 This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017 2025 CAFE standards

Unsettled Issues Regarding Autonomous Vehicles and Open-source Software Rahul Razdan, 2021-04-21 As automobiles morph from stand alone mechanical objects to highly connected autonomous systems with increasing amounts of electronic components To manage these complex systems some semblance of in car decision making is also being built and networked to a cloud architecture This cloud can also enable even deeper capabilities within the broader automotive ecosystem *Unsettled Issues Regarding Autonomous Vehicles and Open source Software* introduces the impact of software in advanced automotive

applications the role of open source communities in accelerating innovation and the important topic of safety and cybersecurity As electronic functionality is captured in software and a bigger percentage of that software is open source code some critical challenges arise concerning security and validation <https://doi.org/10.4271/EPR2021009>

Important Factors for Accurate Scale-Resolving Simulations of Automotive Aerodynamics Petter Ekman, 2020-04-02

Road transports are responsible for almost 18 % of the greenhouse gas emission in Europe and are today the leading cause of air pollution in cities Aerodynamic resistance has a significant effect on fuel consumption and hence the emission of vehicles For electric vehicles emissions are not affected by the aerodynamics as such but instead have a significant effect on the effective range of the vehicle In 2017 a new measurement procedure was introduced Worldwide Harmonized Light Vehicles Test Procedure WLTP for measuring emissions fuel consumption and range This procedure includes a new test cycle with increased average driving speed compared to the former procedure which thereby increases the importance of the aerodynamic resistance as it drastically increases with speed A second effect is that the exact car configuration sold to the customer needs to be certified in terms of fuel consumption and emissions The result is that every possible combination of optional extras which might affect the aerodynamic resistance needs to be aerodynamically analyzed and possibly improved From 2021 the European Commission will introduce stricter emission regulations for new passenger cars with the fleet wide average lowered to 95 grams CO₂ km which puts an even higher demand on achieving efficient aerodynamics Virtual development of the aerodynamics of road vehicles is today used to a great extent using Computational Fluid Dynamics as it enables faster and cheaper development However achieving high accuracy for the prediction of the flow field and aerodynamic forces is challenging especially given the complexity of both the vehicle geometry in itself and the surrounding flow field Even for a simplified generic bluff body accurately predicting the flow field and aerodynamic forces is a challenge The main reason for this challenge of achieving results with high accuracy is the prediction of the complex behavior of turbulence Scale resolving simulation SRS methods such as Large Eddy Simulation LES where most of the turbulent structures are resolved has in many studies shown high accuracy but unfortunately to a very high computational cost It is primarily the small turbulent structures within the near wall region that requires a fine resolution in both space the mesh and in time This fine resolution is the reason for the very high computational cost and makes LES unfeasible for practical use in industrial aerodynamic development at present and in the near future By modeling the turbulent structures within the near wall region using a Reynolds Averaged Navier Stokes RANS model and resolving the turbulence outside the region with a LES model a coarser resolution is possible to use resulting in significantly lower computational cost Which used RANS model is of high importance and especially how much turbulent viscosity the model generates as too high values can result in suppression of the resolved turbulence The transitioning between the RANS and LES regions have a significant effect on the results Faster transition enables more resolved turbulence favorable for higher accuracy but needs to be balanced with sufficient shielding of the

RANS region If resolving the turbulence occurs within the near wall region and the mesh is not sufficiently fine it can result in poor accuracy By increasing the time step size and disregarding best practice guides the computational cost can be significantly reduced The accuracy is reasonably insensitive to the larger time step sizes until a certain degree thereby enabling computationally cheaper SRS to achieve high accuracy of aerodynamic predictions needed to meet present and future emission regulations 273 technical questions and answers for job interview Offshore Oil & Gas Platforms Petrogav International Oil & Gas Training Center,2020-06-29 The job interview is probably the most important step you will take in your job search journey Because it s always important to be prepared to respond effectively to the questions that employers typically ask at a job interview Petrogav International has prepared this eBooks that will help you to get a job in oil and gas industry Since these questions are so common hiring managers will expect you to be able to answer them smoothly and without hesitation This eBook contains 273 questions and answers for job interview and as a BONUS web addresses to 218 video movies for a better understanding of the technological process This course covers aspects like HSE Process Mechanical Electrical and Instrumentation Control that will enable you to apply for any position in the Oil and Gas Industry Journal of the Society of Automotive Engineers ,1928 Vols 30 54 1932 46 issued in 2 separately paged sections General editorial section and a Transactions section Beginning in 1947 the Transactions section is continued as SAE quarterly transactions
