Understanding Organometallic Reaction

Mechanisms and Catalysis Valentin P. Ananikov, 2014-08-29 Exploring and highlighting the new horizons in the studies of reaction mechanisms that open joint application of experimental studies and theoretical calculations is the goal of this book. The latest insights and developments in the mechanistic studies of organometallic reactions and catalytic processes are presented and reviewed. The book adopts a unique approach exemplifying how to use experiments, spectroscopy measurements and computational methods to reveal reaction pathways and molecular structures of catalysts rather than concentrating solely on one discipline. The result is a deeper understanding of the underlying reaction mechanism and correlation between molecular structure and reactivity. The contributions represent a wealth of first hand information from renowned experts working in these disciplines covering such topics as activation of small molecules, C-C and C-Heteroatom bonds formation, cross coupling reactions, carbon dioxide conversion, homogeneous and heterogeneous transition metal catalysis and metal-graphene systems. With the knowledge gained, the reader will be able to improve existing reaction protocols and rationally design more efficient catalysts or selective reactions. An indispensable source of information for synthetic, analytical and theoretical chemists in academia and industry.

Pathways to Success Nick Salafsky, Richard A. Margoluis, 2021-12-02 As environmental problems grow larger and more pressing, conservationists have had to adapt. With a shrinking window of time to act, they are turning to broad approaches to combat continental and global scale crises of biodiversity loss, invasive species and climate change. *Pathways to Success*, the long-awaited successor to the classic volume *Measures of Success*, is a modern guide to building large-scale transformative programs capable of tackling the complex conservation crises we face today. In this strikingly illustrated volume, coauthors Nick Salafsky and Richard Margoluis walk readers through fundamental concepts of effective program-level design, helping them to think strategically about project coordination, funding and stakeholder input. Chapters in the first part of the book look at all aspects of designing and implementing large-scale conservation programs, while the second part focuses on how to use data and information to manage, adapt and learn from program strategies. In addition, the authors offer practical advice for avoiding pitfalls such as formulaic recipes and simplistic silver bullet solutions that can trip up otherwise well-intentioned efforts. Abundant graphics help to explain and clarify concepts presented in the text, and a glossary in the back matter defines technical terms for the reader. *Pathways to Success* is the definitive guide for conservation program managers and funders who want to increase the scale and effectiveness of their work combating biodiversity loss, climate change and other pressing environmental issues.
