Problem Solutions

Chapter 2 (Bayesian Decision Theory)

Problem 11 (randomized rules)

Part (a): Let $R(x)$ be the average risk given measurement x . Then since this risk depends on the action and correspondingly the probability of taking such action, this risk can be expressed as

$$R(x) = \sum_{i=1}^m R(a_i|x)P(a_i|x)$$

Then the total risk (over all possible x) is given by the average of $R(x)$ or

$$R = \int_{\Omega_x} (\sum_{i=1}^m R(a_i|x)P(a_i|x))p(x)dx$$

Part (b): One would pick

$$P(a_i|x) = \begin{cases} 1 & i = \text{ArgMin}_i R(a_i|x) \\ 0 & i = \text{anything else} \end{cases}$$

Thus for every x pick the action that minimizes the local risk. This amounts to a deterministic rule i.e. there is no benefit to using randomness.

Pattern Classification Duda Problem Solution:

Pattern Classification Richard O. Duda, Peter E. Hart, David G. Stork, 2012-11-09 The first edition published in 1973 has become a classic reference in the field. Now with the second edition, readers will find information on key new topics such as neural networks and statistical pattern recognition, the theory of machine learning, and the theory of invariances. Also included are worked examples, comparisons between different methods, extensive graphics, expanded exercises, and computer project topics. An Instructor's Manual presenting detailed solutions to all the problems in the book is available from the Wiley editorial department. *Machine Learning Algorithms for Problem Solving in Computational Applications: Intelligent Techniques* Kulkarni, Siddhivinayak, 2012-06-30 Machine learning is an emerging area of computer science that deals with the design and development of new algorithms based on various types of data. *Machine Learning Algorithms for Problem Solving in Computational Applications: Intelligent Techniques* addresses the complex realm of machine learning and its applications for solving various real world problems in a variety of disciplines such as manufacturing, business information retrieval, and security. This premier reference source is essential for professors, researchers, and students in artificial intelligence as well as computer science and engineering.

Solving Problems in Environmental Engineering and Geosciences with Artificial Neural Networks Farid U. Dowla, Leah L. Rogers, 1995 This book, complete with exercises and ANN algorithms, illustrates how ANNs can be used in solving problems in environmental engineering and the geosciences and provides the necessary tools to get started using these elegant and efficient new techniques. Abductive Inference Models for Diagnostic Problem-Solving Yun Peng, James A. Reggia, 2012-12-06 Making a diagnosis when something goes wrong with a natural or man-made system can be difficult. In many fields such as medicine or electronics, a long training period and apprenticeship are required to become a skilled diagnostician. During this time, a novice diagnostician is asked to assimilate a large amount of knowledge about the class of systems to be diagnosed. In contrast, the novice is not really taught how to reason with this knowledge in arriving at a conclusion or a diagnosis, except perhaps implicitly through case examples. This would seem to indicate that many of the essential aspects of diagnostic reasoning are a type of intuitive, based common sense reasoning. More precisely, diagnostic reasoning can be classified as a type of inference known as abductive reasoning or abduction. Abduction is defined to be a process of generating a plausible explanation for a given set of observations or facts. Although mentioned in Aristotle's work

the study of formal aspects of abduction did not really start until about a century ago
