

MAINTENANCE

4. Measure the distance from the string to the rim at the front and rear of the front rim. Rear measurement should be $1/16'' - 1/8''$ (2-3 mm) more than the front measurement.

Toe Adjustment

If toe alignment is incorrect, measure the distance between vehicle center and each wheel. This will tell you which tie rod needs adjusting.

NOTE: Be sure the handlebars are straight ahead before determining which tie rod(s) need adjustment.

CAUTION

During tie rod adjustment, it is very important that the following precautions be taken when tightening tie rod end jam nuts. If the rod end is positioned incorrectly it will not pivot, and may break.

To adjust toe alignment:

- Hold tie rod end to keep it from rotating.
- Loosen jam nuts at both end of the tie rod.

- Shorten or lengthen the tie rod until alignment is as required to achieve the proper toe setting - ($1/8''$ to $1/4''$).

•Important: When tightening the tie rod end jam nuts, the rod ends must be held parallel to prevent rod end damage and premature wear. Damage may not be immediately apparent if done incorrectly. See illustration.

Front Suspension Inspection

Compress and release front suspension. Damping should be smooth throughout the range of travel. Inspect the front shocks and springs to ensure proper function. If the shock is leaking oil, replace it.

Check all front suspension components for wear or damage. Check shock mounting fasteners to ensure they are tight. Inspect A-arm and weldments for any sign of damage.

Rear Suspension Inspection

Compress and release rear suspension. Damping should be smooth throughout the range of travel.

- Check all rear suspension components for wear or damage.

Polaris Outlaw 90 Repair Manual

R.R. Bowker Company
