Chance Encounters Kristien Hens, 2022-12-09 In this rigorous and necessary book Kristien Hens brings together bioethics and the philosophy of biology to argue that it is ethically necessary for scientific research to include a place for the philosopher As well as ethical their role is conceptual they can improve the quality and coherence of scientific research by ensuring that particular concepts are used consistently and thoughtfully across interdisciplinary projects Hens argues that chance and uncertainty play a central part in bioethics but that these qualities can be in tension with the attempt to establish a given theory as scientific knowledge in describing organisms and practices in a sense we create the world Hens contends that this is necessarily an ethical activity Examining genetic research biomedical ethics autism research and the concept of risk Hens illustrates that there is no universal or neutral state of scientific and clinical knowledge and that attending to the situatedness of individual experience is essential to understand the world around us to know its and our limitations and to forge an ethical future Chance Encounters is aimed at a broad audience of researchers in bioethics philosophy anthropology sociology as well as biomedical and environmental scientists It will also be relevant to policymakers and the artwork by Christina Stadlbauer and Bartaku will be of interest to artists and writers working at the intersection of art and science

uniquely long and complicated migrations Photo by Chuck Heikkinen **Humanize** Thomas Heatherwick,2023-11-07 From one of the world's most innovative designers comes a fiercely passionate manifesto on why so many places have become miserable and boring and how we can make them better for everyone featuring hundreds of photographs and illustrations that will change how you see the world around you We are living through a global catastrophe Buildings affect how we feel moment by moment day by day They have the power to lift us up and make us feel awestruck playful safe and inspired just as they can make us feel alienated and sad But many of the places where we live work learn and heal have become monotonous and disposable We're surrounded by cheap boring buildings that make people stressed sick and unhappy In short much of our world has been crafted in a way that is hostile to human experience Now drawing on his experience of the last thirty years in making bold beautiful objects and buildings Thomas Heatherwick offers both an informed critique of the inhumanity in most of today's contemporary building design and a rousing call for action Looking through Heatherwick's eyes we see familiar landmarks and cityscapes around the world from London Paris Barcelona Singapore New York Vancouver and beyond both old and new famous and obscure to learn how places can either sap the life out of us or nourish our senses and our psyche The time has come he says to put emotion back at the heart of the design process and the reasons to do so could not be more urgent Design is not superficial it has an impact upon economics climate change our mental and physical wellbeing even the peace and cohesion of our societies As citizens and users we need a world full of architectural diversity that delights and unites us And as makers and designers we can help create a world where cities reconnect with their essential mission to provide human spaces where people mix meet inspire each other and live out their full potential Elegantly crafted by Heatherwick's own studio and fully illustrated with hundreds of black and white photos Humanize is an urgent call to arms for making our world a better place for everyone to live and provides the vision and tools for us to make it a reality **Wholeness Living** M. Balige,2010-10-25 Wholeness Living is about recognizing the power that exists within us in others and in the Higher Power When these powers are in harmony we experience growth in the sense of physical health high self esteem high social interest and high optimism Therefore wholeness living is the openness to the truth about the relationship with the physical self the psychological self others and the Higher Power Based on years of clinical practice academic research and personal investigation Dr Bonaventura Balige's approach to leading a full rich and happy life focuses on four main areas the physical the psychological the social and the spiritual any one or more of which can be at the root of our difficulties In this book are lessons and heartfelt advice to help us address the issues interfering with our enjoyment of life While it is true that life is often difficult we have the tools to deal with any situation Dr Balige shows us that every person has the power to create the wholeness that can see us through the storms of life Every person can find happiness by following the steps explaining what wholeness living entails **The Living Age** ,1916 **Experimental Medicine** Claude Bernard, Among great men Claude Bernard should be counted fortunate in that he has not become a mythical figure Pasteur

s discoveries are hardly more remarkable though their immediate influence has been much greater and his horizon was incontestably less broad But Bernard remains a plain man highly distinguished but not obscured by the growth of a legend His physiological researches may have immortalized his name but Experimental Medicine never exerted the influence which it promised What Bernard saw as the future of physiology remained for decades obscured so his writings were only half understood His influence however was exerted far beyond medicine Stewart Wolf suggests that Claude Bernard s genius in physiological experimentation is similar to the extraordinary Sherlock Holmes capacity to solve crimes and William Osler s uncanny abilities in clinical diagnosis Like both of those creative searchers Claude Bernard typically focused on findings that did not accord with prevailing theory His curiosity led him to attempt to explain the finding by a tentative hypothesis he would then devise an experiment Although he sought for a quantitative result that might serve as a basis of a theory he had little confidence in statistics as a guide to certainty Bernard s opposition scientists prevailing habit of segregating their inquiries into systems rather than studying the unified organism is particularly striking This volume will be important for those in the medical field as well as those interested in the history of science

An Introduction to the Study of Experimental Medicine Claude Bernard,1927 First English translation of the classical work on the principles of physiological investigation in life sciences **Littell's Living Age** ,1916 **The Quarterly Review** William Gifford,Sir John Taylor Coleridge,John Gibson Lockhart,Whitwell Elwin,William Macpherson,William Smith,Sir John Murray IV,Rowland Edmund Prothero (Baron Ernle),George Walter Prothero,1916
