The Heredity of Behavior Disorders in Adults and Children D.L. Pauls, S.M. Singer, S.G. Vandenberg, 2012-12-06
Current trends in morbidity suggest that by the beginning of the twenty-first century psychiatric illness may become the most pressing problem in public health in many of the advanced countries As ably demonstrated by Vandenberg Singer and Pauls the principal identifiable etiology of the major psychiatric disorders is heredity if progress is to be made in prevention and treatment of these disorders it may have to come from improved understanding of their inheritance A relentless increase has been observed in the frequency of mood disorders primarily major depression but also manic depressive illness appearing earlier and more frequently in each age cohort born since approximately 1940 Because major depression is a recurrent disorder whose episodes increase in frequency with age the number of observed depressions can be expected to increase dramatically as these people reach middle and old age The rate of suicide has also increased enormously according to birth cohort Starting with people born around 1935 the rate of suicide between 15 and 19 years of age has increased more than 10 times from the earliest to the most recent birth cohorts What is not clear is if there will be a compensatory reduction in suicide rate as this cohort ages because people likely to commit suicide will have done so earlier or if this presages a general increase in suicide comparable to the increase in mood disorders and perhaps a function of them *Managing Anxiety at Work* 50 minutes, 2017-11-23 Ready to take your career to the next level Find out everything you need to know about dealing with work related anxiety and panic attacks with this practical guide More and more workers are feeling stressed and anxious at work and in its most severe form anxiety can be debilitating and severely diminish your professional effectiveness Fortunately identifying and tackling the root causes of this widespread problem including unrealistic objectives and the fear of not being good enough will allow you to remain calm and happy at work no matter how much pressure you are under In 50 minutes you will be able to Identify the causes symptoms and effects of anxiety and panic attacks Find out why you feel anxious worried or stressed at work Select the best course of treatment for you and take action to prevent relapses ABOUT 50 MINUTES COM COACHING The Coaching series from the 50 Minutes collection is aimed at all those who at any stage in their careers are looking to acquire personal or professional skills adapt to new situations or simply re-evaluate their work life balance The concise and effective style of our guides enables you to gain an in depth understanding of a broad range of concepts combining theory constructive examples and practical exercises to enhance your learning

National Library of Medicine Current Catalog National Library of Medicine (U.S.), 1965 **My Age of Anxiety** Scott

Stossel, 2014-01-07 A riveting revelatory and moving account of the author's struggles with anxiety and of the history of efforts by scientists, philosophers and writers to understand the condition. As recently as thirty five years ago anxiety did not exist as a diagnostic category. Today it is the most common form of officially classified mental illness. Scott Stossel gracefully guides us across the terrain of an affliction that is pervasive yet too often misunderstood. Drawing on his own long standing battle with anxiety, Stossel presents an astonishing history at once intimate and authoritative of the efforts to understand the condition from medical, cultural, philosophical and experiential perspectives. He ranges from the earliest medical reports of Galen and Hippocrates through later observations by Robert Burton and Søren Kierkegaard to the investigations by great nineteenth century scientists such as Charles Darwin, William James and Sigmund Freud as they began to explore its sources and causes to the latest research by neuroscientists and geneticists. Stossel reports on famous individuals who struggled with anxiety as well as on the afflicted generations of his own family. His portrait of anxiety reveals not only the emotion's myriad manifestations and the anguish anxiety produces but also the countless psychotherapies, medications and other often outlandish treatments that have been developed to counteract it. Stossel vividly depicts anxiety's human toll, its crippling impact, its devastating power to paralyze while at the same time exploring how those who suffer from it find ways to manage and control it. *My Age of Anxiety* is learned and empathetic, humorous and inspirational, offering the reader great insight into the biological, cultural and environmental factors that contribute to the affliction. The Language of the Self Jacques Lacan, 1981 Lacan's commentaries on Freud had revolutionary implications for philosophy and literary criticism. He held that if the unconscious exists it functions linguistically rather than symbolically. Includes a study that explains his work and relates it to the context of contemporary thought. *The Lancet*, 1916 How History Works Martin Davies, 2015-09-16 *How History Works* assesses the social function of academic knowledge in the humanities exemplified by history and offers a critique of the validity of historical knowledge. The book focusses on history's academic disciplinary ethos to offer a reconception of the discipline of history, arguing that it is an existential liability if critical analysis reveals the sense that history offers to the world to be illusory, what stops historical scholarship from becoming a disguise for pessimism or nihilism. History is routinely invoked in all kinds of cultural, political, economic, psychological situations to provide a reliable account or justification of what is happening. Moreover, it addresses a world already receptive to comprehensive historical explanations since everyone has some knowledge of history; everyone can be manipulated by it. This book analyses the relationship between specialized knowledge and everyday experience, taking phenomenology (Husserl) and pragmatism (James) as methodological guides. It is informed by a wide literature sceptical of the sense academic historical expertise produces and of the work history does, represented by thinkers such as Schopenhauer, Nietzsche, Valéry, Anders and Cioran. *How History Works* discusses how history makes sense of the world even if what happens is senseless, arguing that behind the smoke screen of historical scholarship looms a chaotic world dynamic indifferent to human existence. It is valuable reading for anyone.
