Remote Sensing Digital Image Analysis John A. Richards, 2022-01-06 Remote Sensing Digital Image Analysis provides a comprehensive treatment of the methods used for the processing and interpretation of remotely sensed image data. Over the past decade, there have been continuing and significant developments in the algorithms used for the analysis of remote sensing imagery, even though many of the fundamentals have substantially remained the same. As with its predecessors, this new edition again presents material that has retained value but also includes newer techniques covered from the perspective of operational remote sensing. The book is designed as a teaching text for the senior undergraduate and postgraduate student and as a fundamental treatment for those engaged in research using digital image analysis in remote sensing. The presentation level is for the mathematical non-specialist. Since the very great number of operational users of remote sensing come from the earth sciences communities, the text is pitched at a level commensurate with their background. The chapters progress logically through means for the acquisition of remote sensing images, techniques by which they can be corrected, and methods for their interpretation. The prime focus is on applications of the methods, so that worked examples are included, and a set of problems concludes each chapter.

Computer Vision for Multimedia Applications: Methods and Solutions Wang, Jinjun, Cheng, Jian, Jiang, Shuqiang, 2010-10-31 This book presents the latest developments in computer vision methods applicable to various problems in multimedia computing, including new ideas as well as problems in computer vision and multimedia computing. Provided by publisher.

Forthcoming Books Rose Arny, 2003-04 **Advancing neural network-based intelligent algorithms in robotics: challenges, solutions, and future perspectives** Long Jin, Xin Ma, 2025-09-15 The integration of neural network-based intelligent algorithms with robotics has revolutionized the field of robotics in recent years. Inspired by the human brain, neural networks have shown great potential in enabling robots to learn from data, make intelligent decisions, and perform

complex tasks These algorithms have been applied in various areas of robotics including perception control planning and learning More precisely convolutional neural networks CNNs have significantly improved robot vision capabilities while recurrent neural networks RNNs have enhanced sequential data processing for tasks such as speech recognition and natural language understanding Deep reinforcement learning algorithms have enabled robots to learn optimal control policies through interaction with their environment Additionally recurrent neural networks have contributed to the stability control performance improvement and redundancy resolution of robots The continuous advancements in neural network based algorithms in robotics holds great promise for the future of intelligent robotic systems

Color Image Processing

Rastislav Lukac, Konstantinos N. Plataniotis, 2018-10-03 Color Image Processing Methods and Applications embraces two decades of extraordinary growth in the technologies and applications for color image processing The book offers comprehensive coverage of state of the art systems processing techniques and emerging applications of digital color imaging To elucidate the significant progress in specialized areas the editors invited renowned authorities to address specific research challenges and recent trends in their area of expertise The book begins by focusing on color fundamentals including color management gamut mapping and color constancy The remaining chapters detail the latest techniques and approaches to contemporary and traditional color image processing and analysis for a broad spectrum of sophisticated applications including Vector and semantic processing Secure imaging Object recognition and feature detection Facial and retinal image analysis Digital camera image processing Spectral and superresolution imaging Image and video colorization Virtual restoration of artwork Video shot segmentation and surveillance Color Image Processing Methods and Applications is a versatile resource that can be used as a graduate textbook or as stand alone reference for the design and the implementation of various image and video processing tasks for cutting edge applications This book is part of the Digital Imaging and Computer Vision series
