The End of Doom Ronald Bailey, 2024-08-06 In the past five decades there have been many many forecasts of impending environmental doom They have universally been proven wrong Meanwhile those who have bet on human resourcefulness have almost always been correct In his widely praised book *Ecosciam* Ronald Bailey strongly countered environmentalist alarmism using facts to demonstrate just how wildly overstated many claims of impending ecological doom really were Now twenty years later the Reason Magazine science correspondent is back to assess the future of humanity and the global biosphere Bailey finds contrary to popular belief that many present ecological trends are quite positive Including Falling cancer incidence rates in the United States The likelihood of a declining world population by mid century The abundant return of agricultural land to nature as the world reaches peak farmland A proven link between increases in national wealth and reductions in air and water pollution Global warming is a problem but the cost of clean energy could soon fall below that of fossil fuels In *The End of Doom* Bailey avoids polemics and offers a balanced fact based and ultimately hopeful perspective on our current environmental situation Now isn't that a breath of fresh air

Progress Toward Restoring the Everglades National Academies of Sciences, Engineering, and Medicine,Division on Earth and Life Studies,Board on Environmental Studies and Toxicology,Water Science and Technology Board,Committee on Independent Scientific Review of Everglades Restoration Progress,2017-04-07 The Everglades

ecosystem is vast stretching more than 200 miles from Orlando to Florida Bay and Everglades National Park is but a part located at the southern end During the 19th and 20th centuries the historical Everglades has been reduced to half of its original size and what remains is not the pristine ecosystem many image it to be but one that has been highly engineered and otherwise heavily influenced and is intensely managed by humans Rather than slowly flowing southward in a broad river of grass water moves through a maze of canals levees pump stations and hydraulic control structures and a substantial fraction is diverted from the natural system to meet water supply and flood control needs The water that remains is polluted by phosphorus and other contaminants originating from agriculture and other human activities Many components of the natural system are highly degraded and continue to degrade Progress Toward Restoring the Everglades is the sixth biennial review of progress made in meeting the goals of the Comprehensive Everglades Restoration Plan CERP This complex multibillion dollar project to protect and restore the remaining Everglades has a 30 40 year timeline This report assesses progress made in the various separate project components and discusses specific scientific and engineering issues that may impact further progress According to Progress Toward Restoring the Everglades a dedicated source of funding could provide ongoing long term system wide monitoring and assessment that is critical to meeting restoration objectives This report examines the implications of knowledge gained and changes in widely accepted scientific understanding regarding pre drainage hydrology climate change and the feasibility of water storage since the CERP was developed *Introduction to Energy and Climate*

Processes of Believing: The Acquisition, Maintenance, and Change in Credictions Hans-Ferdinand Angel, Lluís Oviedo, Raymond F. Paloutzian, Anne L.C.

Runehov, Rüdiger J. Seitz, 2017-04-13 This volume answers the question Why do we believe what we believe It examines current research on the concept of beliefs and the development in our understanding of the process of believing It takes into account empirical findings in the field of neuroscience regarding the processes that underlie beliefs and discusses the notion that beyond the interactive exploratory analysis of sensory information from the complex outside world humans engage in an evaluative analysis by which they attribute personal meaning and relevance to the probabilistic representations of objects and events Beliefs exert a strong influence on behaviour decision making and identifying and solving problems Despite their importance beliefs have until recently not been at the centre of scientific interest In fact belief is an ill defined phenomenon From a transdisciplinary perspective the actual approaches to understanding belief seem incompatible as they attempt to

highlight such different topics as belief religion belief spirituality belief faith belief knowledge belief attitude belief disbelief belief illusion and believing brain function This situation contradicts the idea that belief is close to pathological phenomena and that it should be eliminated from scientific discussions Rather believing is fundamental for understanding the many problems of every day life In fact the book shows that beliefs are relevant for politics international affairs economy law or religions also in modern societies This book presents the increasing scientific interest in beliefs and believing and reflects the change in focus from the content aspect of belief towards the fluid nature of believing

Futures: Imagining Socioecological Transformation Bruce Willems-Braun, 2018-02-02 Futures Imagining Socioecological Transformation brings together leading scholars to explore how we might know enact and struggle for the conjoined social and ecological transformations we need to achieve just and sustainable futures The question of transformation and how it might be achieved is explored across a variety of topics and geographical sites and through heterodox analytical and theoretical approaches in a collective effort to move beyond a form of critique that hands down judgements to one that brings new ideas and new possibilities to life Chapters are lively and original engagements with concrete situations that sparkle with creativity Together they add up to an impressive study of how to live and what to struggle for in the complex socioecological landscapes of the Anthropocene This book was previously published as a special issue of the Annals of the Association of American Geographers

Regional Risk and Security in Japan Glenn D. Hook, Ra Mason, Paul O'Shea, 2015-05-20 Japan's unusual position in the realm of international politics encapsulates a three fold juxtaposition both in and out of Asia both occupied by and a close ally of the United States and both a key trade partner and a strategic rival of China Whilst international relations theory offers a number of ways to analyse these relations this book instead utilizes the concept of risk to provide an innovative perspective on Japan's relations with China North Korea and the US The book elucidates how risk potential harm and harm are faced disproportionately by certain groups in society This is demonstrated by providing an empirically rich analysis of the domestic implications of security relations with China North Korea and the United States through the presence of US troops in Okinawa Beginning with a theoretical discussion of risk it goes on to demonstrate how the concept of risk adds value to the study of international relations in three senses First the concept helps to break down the boundaries between the international and domestic Second the focus on risk and the everyday directs us to ask basic questions about the costs and benefits of a security policy meant to secure the national population Third what implications do these two points have for governance The question is one of governance as Japan's externally oriented security policy produces domestic insecurity shared disproportionately not equally as this volume makes clear Developing the theory of risk as a tool for understanding international relations this book will be of great interest to students and scholars of Asian politics Japanese politics international relations and security studies as well as to policy makers and practitioners working in the field

Polar Bears on the Edge Morten Jørgensen, 2015 Do you like polar bears Do you want polar bears to be around in 50

years Do you think that climate change is the only major threat to polar bear survival Do you believe that polar bears are adequately protected today Would you like to contribute to saving polar bears today and in the future If your answer to any of those questions is yes you need to read this book This book is an eye opener and should kick off extensive debates Dr Thor S Larsen professor emeritus Member of the IUCN Polar Bear Specialist Group 1968 1985 In this impassioned book Morten raises very important provocative questions that are not being addressed by the international environmental groups Art Wolfe Award winning conservation photographer In this book the author analyses the current status of the polar bear And he punctures the myth that polar bears are well protected and managed today While most people think that global warming is the overhanging threat to polar bear survival the author documents that it is actually the continuation of an unsustainable hunting pressure that is driving the species towards extinction Across 228 pages interspersed with beautiful photographs Morten Joergensen demonstrates how there are probably fewer polar bears than most authorities claim how hunting is the greatest manageable threat to the species how current protection measures are insufficient how the animal has been commercialized and how lack of courage and honesty is allowing this scenario to continue The book also contains a long string of realistic and very urgent recommendations for action to save polar bears before they are gone forever
