Bergo, 1999-04-30 The act of thought thought as an act would precede the thought thinking or becoming conscious of an act The notion of act involves a violence essentially the violence of transitivity lacking in the transcendence of thought Totality and Infinity The work of Emmanuel Levinas revolves around two preoccupations First his philosophical project can be described as the construction of a formal ethics grounded upon the transcendence of the other human being and a subject's spontaneous responsibility toward that other Second Levinas has written extensively on and as a member of the cultural and textual life of Judaism These two concerns are intertwined Their relation however is one of considerable complexity Levinas' philosophical project stems directly from his situation as a Jewish thinker in the twentieth century and takes its particular form from his study of the Torah and the Talmud It is indeed a hermeneutics of biblical experience If inspired by Judaism Levinas' ethics are not eo ipso confessional What his ethics takes from Judaism rather is a particular way of conceiving transcendence and the other human being It owes to the philosophy of Franz Rosenzweig and Martin Buber a logos of the world and of the holy which acknowledges their incomensurability without positing one as fallen and the other as supernal **Defining Science** Richard Yeo, 2003-09-18 This 1993 book deals with debates about science its history philosophy and moral value in the first half of the nineteenth century a period in which the modern features of science developed Defining Science also examines the different forms or genres in which science was discussed in the public sphere most crucially in the Victorian review journals but also in biographical historical and educational works William Whewell wrote major works on the history and philosophy of science before these became technical subjects Consequently he had to define his own role as a metascientific critic in a manner akin to cultural critics like Coleridge and Carlyle as well as seeking to define science for both expert and lay audiences **Tables of Lamé Polynomials** F.M. Arscott, I.M. Khabaza, 2014-05-23 Tables of Lamé polynomials presents tables of Lamé polynomials which were calculated on the Ferranti Mercury machine at the London University Computer Unit in England Lamé polynomials are solutions of Lamé differential equation which is used in a number of different forms including the Jacobian form A particular Lamé polynomial is specified completely apart from a constant multiplier by the type number the value of  $N$  and the position of the corresponding eigenvalue of  $h$  in the set of such eigenvalues Comprised of three chapters this volume begins with an introduction to the theory of Lamé polynomials and the equations involved together with their elementary properties and correspondence with other notations The tabulated form of Lamé polynomials and the method of tabulation are discussed and approximations in limiting cases are considered The next chapter deals with the method of computation of the Lamé polynomials including the calculation of the coefficients eigenroots

and eigenvectors The book concludes with a description of the instructions and terms used in the program using the FIG input routine on the Ferranti Mercury computer This monograph will be of interest to mathematicians and mathematics students
