

5. **Wing span:** The tip-to-tip distance of the longest primary feathers when the bird is placed on its back with wings outstretched. _____

Examining the Pigeon Muscular System

1. Make a thin cut, creating a mid-ventral incision.
2. Then create two additional, thin incisions into the wing areas and two more into the leg areas.
3. Fold back and pin down just the skin so that you can more easily see the muscles of each body.
4. Locate the two large **PECTORALES MUSCLES**, which are attached to the **KEEL** (sketched in picture to the right). A keel in bird anatomy is an extension of the sternum (breastbone) which runs along the midline of the sternum and extends outward, perpendicular to the plane of the ribs. The keel provides an anchor to which a bird's wing muscles attach, thereby providing adequate leverage for flight. Keels do not exist on all birds; flightless birds lack a keel structure.

Pigeon Lab Question Dissection

L Cohen
