Duschl, Amber S. Bismack, 2016-01-08 *Reconceptualizing STEM Education* explores and maps out research and development ideas and issues around five central practice themes: Systems Thinking, Model Based Reasoning, Quantitative Reasoning, Equity, Epistemic and Ethical Outcomes, and STEM Communication and Outreach. These themes are aligned with the comprehensive agenda for the reform of science and engineering education set out by the 2015 PISA Framework, the US Next Generation Science Standards, and the US National Research Council's *A Framework for K-12 Science Education*. The new practice-focused agenda has implications for the redesign of preK-12 education for alignment of curriculum, instruction, assessment, STEM teacher education, and professional development, postsecondary, further, and graduate studies, and out-of-school informal education. In each section, experts set out powerful ideas followed by two eminent discussant responses that both respond to and provoke additional ideas from the lead papers. In the associated website, highly distinguished nationally recognized STEM education scholars and policymakers engage in deep conversations and considerations addressing core practices that guide STEM education.

**Automatic Item Generation** Mark J. Gierl, Thomas M. Haladyna, 2013 Automatic item generation (AIG) represents a relatively new and unique research area where specific cognitive and psychometric theories are applied to test construction practices for the purpose of producing test items using technology. The purpose of this book is to bring researchers and practitioners up to date on the growing body of research on AIG by organizing in one volume what is currently known about this research area. Part I begins with an overview of the concepts and topics necessary for understanding AIG by focusing on both its history and current applications. Part II presents two theoretical frameworks and practical applications of these frameworks in the production of item generation. Part III summarizes the psychological and substantive characteristics of generated items. Part IV concludes with a discussion of the statistical models that can be used to estimate the item characteristics of generated items. Features: one future application of AIG describes the current technologies used for AIG and also highlights the unresolved issues that must be addressed as AIG continues to mature as a research area. Comprehensive: The book provides a comprehensive analysis of both the theoretical concepts that define automatic item generation and the practical considerations required to implement these concepts. Varied Applications: Readers are provided with novel applications in diverse content areas, e.g., science and reading comprehension that range across all educational levels, elementary through university.

**ChatGPT and Other Generative AI Tools** Jochen Kuhn, Stefan Küchemann, Knut Neumann, Martina Rau, 2025-02-17 In the past ten years, applications of generative artificial intelligence (GAI) have found rapidly growing use in medicine, science, and daily life. Large language models (LLMs) opened up new avenues in particular for education. LLMs

have been used to create interactive educational content for students stimulate their curiosity generate code explanations and develop assessment questions Additionally LLMs been applied for language practice anxiety alleviation and feedback provision In higher education LLMs have shown potential for assisting in medical exam preparation and clinical decision making In school education LLMs can help teachers with automated evaluation of student responses and respective adaptive feedback More recently LLM based applications such as chatGPT have been used to generate teaching materials or assessment tasks across different subjects The fields understanding of the effects of the use of LLM based applications in classroom teaching however is still in its infancy GAI tools may help solving a range of tasks in education in particular with respect to teachers and students and teachers efforts to generate content However it is critical that teachers and students do not overly rely on GAI generated solutions but instead critically assess each solution Students should furthermore not use GAI tools to avoid investing relevant mental effort to create mental models or more broadly build up competencies

web apr 2 2013 this paper presents the modeling and simulation of digital reverse power relay on matlab simulink in this simulation the relay performance is tested on 11kv synchronous generator connected with 220kv through a step up transformer

is there a relay or and contactor blocks within matlab simulink - Feb 27 2022

web jun 27 2009 a built in block that models an electromagnetic relay is not available in simpowersystems 5 0 r2008b however there is a demo model under the Simscape 3 0 r2008b product that could be used as a reference model for building a relay

*distance protection relay file exchange matlab central* - May 01 2022

web jun 3 2022 the distance protection method is widely used for power system transmission line protection distance relays are one of the main protection devices in a transmission line distance protection relay approximates the impedance down the line to a fault using currents and voltage measurement units

implement protection relay with definite minimum time dmt trip - Aug 16 2023

web the protection relay block implements a protection relay for the hardware and the motor with definite minimum time dmt trip characteristics using the reference limit feedback and reset input signals in the event of a fault the block generates a latched fault signal that you can use to protect the hardware and the motor

power system relay protection simulation based on matlab - Jan 29 2022

web matlab based simulation technology can support the analysis and design of relay protection systems a simulation model is built for the study of power system relay protection as an example the power system fault simulation zero sequence current protection simulation and transformer differential protection simulation are

protection relay software models in interaction with power system - Jun 14 2023

web may 25 2012 protection relay software models in interaction with power system simulators abstract modelling and simulation software developed for analysing protective relaying applications and relay design concepts in power distribution is

design modeling and implementation of multi function protective relay - Feb 10 2023

web jun 17 2020 in this paper a digital multi function protective relay was designed and implemented on matlab simulink in this study we also explore some current techniques ranging from the use of digital logic algorithms to system protection applications
