Digital Picture Processing Azriel Rosenfeld, 2014-06-28 **Digital Picture Processing** **Vision, Modeling, and Visualization 2002** Günther Greiner, 2002 Building-Construction Design - From Principle to Detail José Luis Moro, 2024-02-19 Construction is the means by which designing architects and engineers transform a design idea into built reality It is from this perspective that the subject of building construction design is dealt with by the architect Jos Luis Moro in three comprehensive volumes Each is dedicated to the methodological physical and functional fundamentals the conception of a constructional solution and finally its implementation in the constructional detail Not only do the three volumes provide extensive content they also ensure the greatest possible clarity in the text and graphics in order to make it easier for learners to access the material Importantly they focus not only on conveying technical and scientific information but also on demonstrating the complex relationships and interactions between design material and construction Great importance was attached to developing consistent overarching and meaningful correlations between the numerous and highly diverse topics covered After an introduction to planning theory topics Volume 1 Fundamentals addresses sustainability issues in the context of constructional design This is followed by a discussion of the most important material related considerations and their consequences for the constructional application of the materials The range of currently available industrial building products is also presented Furthermore the essential requirements and functions that building structures must fulfill from a structural building physics building acoustics and fire protection perspective are examined In closing the book considers questions of durability Readings in Computer Vision Martin A. Fischler, Oscar Firschein, 2014-06-28 The field of computer vision combines techniques from physics mathematics psychology artificial intelligence and computer science to examine how machines might construct meaningful descriptions of their surrounding environment The editors of this volume prominent researchers and leaders of the SRI International AI Center Perception Group have selected sixty papers most published since 1980 with the viewpoint that computer vision is concerned with solving seven basic problems Reconstructing 3D scenes from 2D images Decomposing images into their component parts Recognizing and assigning labels to scene objects Deducing and describing relations among scene objects Determining the nature of computer architectures that can support the visual function Representing abstractions in the world of computer memory Matching stored descriptions to image representation Each chapter of this volume addresses one of these problems through an introductory discussion which identifies major ideas and summarizes approaches and through reprints of key research papers Two appendices on crucial assumptions in image interpretation and on parallel architectures for vision applications a glossary of technical terms and a comprehensive bibliography and index complete the volume **Inside Calculus** George R. Exner, 1999-12-22 The approach here relies on two beliefs The first is that almost nobody fully understands calculus the first time around The second is that graphing calculators can be used to simplify the theory of limits for students This book

presents the theoretical pieces of introductory calculus using appropriate technology in a style suitable to accompany almost any first calculus text. It offers a large range of increasingly sophisticated examples and problems to build an understanding of the notion of limit and other theoretical concepts. Aimed at students who will study fields in which the understanding of calculus as a tool is not sufficient, the text uses the spiral approach of teaching returning again and again to difficult topics anticipating such returns across the calculus courses in preparation for the first analysis course. Suitable as the content text for a transition to upper level mathematics course. *Digital Pictures* Arun N. Netravali, 2013-12-19 **Machine Drawing** N. D. Part II provides details of how to draw and put machine components together for an assembly drawing. Part III contains problems on assembly drawings taken from the diverse fields of mechanical production automobile and marine engineering. *Image Analysis* Yujin Zhang, 2017-08-07 This graduate textbook presents fundamentals applications and evaluation of image segregation unit description feature measurement and pattern recognition. Analysis on textile shape and motion are discussed and mathematical tools are employed extensively. Rich in examples and exercises it prepares electrical engineering and computer science students with knowledge and skills for further studies on image understanding. *Monte Carlo N-Particle Simulations for Nuclear Detection and Safeguards* John S.
