Theory of Adaptive Fiber Composites T. H. Brockmann,2009-07-23 Adaptive structural systems in conjunction with multifunctional materials facilitate technical solutions with a wide spectrum of applications and a high degree of integration By virtue of combining the actuation and sensing capabilities of piezoelectric materials with the advantages of fiber composites the anisotropic constitutive properties may be tailored according to

requirements and the failure behavior can be improved Such adaptive fiber composites are very well suited for the task of noise and vibration reduction In this respect the helicopter rotor system represents a very interesting and widely perceptible field of application The occurring oscillations can be reduced with aid of aerodynamic couplings via fast manipulation of the angle of attack being induced by twist actuation of the rotor blade On the one hand the sensing properties may be used to determine the current state of deformation while on the other hand the actuation properties may be used to attain the required state of deformation The implementation of such concepts requires comprehensive knowledge of the theoretical context which shall be illuminated in the work at hand from the examination of the material behavior to the simulation of the rotating structure Dynamics of Civil Structures, Volume 2 Hae Young Noh,Matthew Whelan,P. Scott Harvey,2025-08-07

Dynamics of Civil Structures Volume 2 Proceedings of the 40th IMAC A Conference and Exposition on Structural Dynamics 2022 the second volume of nine from the Conference brings together contributions to this important area of research and engineering The collection presents early findings and case studies on fundamental and applied aspects of the Dynamics of Civil Structures including papers on Structural Vibration Humans Structures Innovative Measurement for Structural Applications Smart Structures and Automation Modal Identification of Structural Systems Bridges and Novel Vibration Analysis Sensors and Control
