

EXAMINE THE PIGEON'S HEAD

1. Examine the pigeon's head. Look closely at the eye, with its moveable upper and lower lid.
2. Gently pull the lids back so that you can see the **NICTITATING MEMBRANE** in the corner of the eye. At the upper end of the beak is a slit-like nasal opening. Just behind this opening, locate a white structure called the **CERE**, which is at the juncture of the beak and the head. Just below and slightly behind the eye, look for the external ear opening.

Morphological Features:

1. **Bill length (culmen):** The distance from the tip of the upper mandible to the end of the culmen at its intersection with the cere, or forehead.
2. **Wing Length:** The wing chord is measured from the bend of the wing (wrist) to the tip of the longest primary using dividers. The flattened wing length is measured by pressing the wing down on a ruler from the wrist to the tip of the longest primary.
3. **Tail Length:** The distance from the tip of the longest **RECTRIX** (longest tail feather) to the point where it emerges from the skin.
4. **Tarsus length:** The distance from the heel joint (tibiotarsus-tarsometatarsal joint) to the point of the tarsometatarsal joint at the base of the middle anterior toe.
5. **Total length:** The distance from the tip of the bill to the tip of the longest rectrix when the bird is placed on its back with the head tipped back parallel to the table surface. Should be reported for fresh specimens only, not museum specimens.
