SPECIAL PINTO PERFORMANCE TRAINING PROGRAM

INTRODUCTION
The Pinto Performance Training Program is designed to provide the technician with the knowledge and skills necessary to diagnose and repair the various performance problems that may occur on the Pinto. This program is divided into two main sections: the first section covers the basic operating principles of the engine, transmission, and driveline; the second section covers the diagnosis and repair of the various performance problems that may occur.

ENGINE OPERATING PRINCIPLES
The engine is the heart of the vehicle and is responsible for converting the chemical energy of the fuel into mechanical energy. The engine consists of several major components, including the cylinder block, cylinder head, crankshaft, and pistons. The pistons are connected to the crankshaft by connecting rods. The crankshaft is connected to the flywheel, which is attached to the transmission. The pistons move up and down in the cylinders, compressing the fuel and air mixture. The combustion of the fuel and air mixture creates a pressure that forces the pistons down, which in turn rotates the crankshaft.

TRANSMISSION OPERATING PRINCIPLES
The transmission is responsible for changing the gear ratio between the engine and the driveline. It consists of several gears that are mounted on shafts. The input shaft is connected to the flywheel, and the output shaft is connected to the driveline. The gears are selected by the driver using the shift lever. The transmission also contains a clutch mechanism that allows the driver to disengage the engine from the transmission when shifting gears.

DRIVELINE OPERATING PRINCIPLES
The driveline is responsible for transmitting the power from the transmission to the wheels. It consists of the driveshaft, axles, and wheels. The driveshaft is connected to the output shaft of the transmission and the axles. The axles are connected to the wheels. The wheels are responsible for propelling the vehicle forward.

DIAGNOSIS AND REPAIR OF PERFORMANCE PROBLEMS
The technician should follow the following steps when diagnosing and repairing performance problems: 1. Check the engine oil level and condition. 2. Check the air filter and replace if necessary. 3. Check the spark plugs and replace if necessary. 4. Check the fuel filter and replace if necessary. 5. Check the timing belt and replace if necessary. 6. Check the transmission fluid level and condition. 7. Check the driveshaft and axles for wear and tear. 8. Check the wheels and tires for proper inflation and wear.
