Nootropics Scorpio Digital Press,2025-07-16 What exactly are nootropics Nootropics are generally called smart drugs because they improve brainpower but more than 80 unique substances can fall under this broad category and they are wildly distinctive and generally useless

They include Adderall for ADHD psychedelics and even coffee Do nootropics actually work Choosing one as a complement is a muddy picture however some nootropics DO work Most smart pills are stimulants short acting chemicals that give you a boost in focus and attention for some hours The nootropics that we have good evidence for such as Adderall and Modafinil sometimes used to help humans recover from a coma are prescribed drugs The smart drugs that aren't prescription based or illegal have little or no proof suggesting they work The substance must Help the brain function under disruptive conditions such as hypoxia low oxygen and electroconvulsive shock Protect the brain from chemical and physical assaults such as anticholinergic drugs and barbiturates Increase the efficacy of neuronal firing control mechanisms in cortical and subcortical regions of the brain Possess few or no side effects and be virtually non toxic Enhance memory and ability to learn Research indicates getting omega 3s from fish is better than simply taking drugs but if fish is simply too tough to get put together or eat then the drugs are an awesome 2D alternative Omega 3s are the real smart drugs in that you could not sense the results the day you consume them however you may be in much better cognitive shape a few years from now than in case you had never added them to your diet If you're interested in increasing your brainpower and memory capacity Scroll back up and buy now
