

Chapter 9 Plate Tectonics

## Section 9.3 Theory of Plate Tectonics

(pages 261–268)

This section discusses plate tectonics, including lithospheric plates and types of plate boundaries.

### Reading Strategy (page 261)

**Comparing and Contrasting** After you read, compare the three types of plate boundaries by completing the table. For more information on this Reading Strategy, see the Reading and Study Skills in the Skills and Reference Handbook at the end of your textbook.

Boundary Type	Relative Plate Motion
convergent	a.
divergent	b. plates move apart
transform fault	c.

Students of a phenomenon as common but complex as andesite genesis often are overwhelmed by or overlook the volume and diversity of relevant information Thus there is need for periodic overview even in the absence of a dramatic breakthrough which solves the andesite problem and even though new ideas and data keep the issues in a state of flux Thus I have summarized the subject through mid 1980 from my perspective to help clarify the long standing problem and to identify profitable areas for future research Overviews are more easily justified than achieved and there are fundamental differences of opinion concerning how to go about them It is professionally dangerous and therefore uncommon for single authors especially those under 35 such as I to summarize a broad active field of science in book length thoroughness Review articles in journals multi authored books or symposia proceedings appear instead The single authored approach is intimidating in scale and can result in loss of thoroughness or authority on individual topics The alternatives lack scope or integration or

both *World Geography* Phillip Bacon, 1989, *Main Tectonic Events and Metallogeny of the North China Craton* Mingguo Zhai, Yue Zhao, Taiping Zhao, 2016-07-25 This book focuses on the metallogeny and main tectonic events of the North China Craton from early Precambrian to Phanerozoic. It covers the Archean crustal growth, Paleoproterozoic rifting, subduction, collision processes, Great Oxidation Event, Meso Neoproterozoic multiple rifting, Phanerozoic reworking of the North China Craton as well as metallogeny related to above different processes. The North China Craton is one of the oldest cratons in the world. It has experienced a complex geological evolution since the early Precambrian and carries important records of secular changes in tectonics and metallogeny. It provides a systematic review and new results on the growth and evolution of the North China Craton and metallogeny. It will be of broad interest to the earth scientists working in the fields of economic geology, geochemistry and tectonics of the North China Craton and eastern Asian. *Geology* Edward P. **International Minerals** Allen F Agnew,2019-04-09 The United States depends on foreign sources for many strategic and essential minerals Secure supplies of such minerals are crucial to the nation s economic and military well being but federal policies with regard to these minerals have continued to vacillate This volume considers the minerals availability issue from a number of perspectives In **Copernicus, God, and Goldilocks** David A. J. Seargent,2001-10-09 In this book author David Seargent takes issue with the assumption long held in Western thought that mankind and the planet we inhabit

has no special or privileged features that our being here is purely a matter of chance Typically the so called Copernican Principle which in essence is simply an empirical statement about our physical non centrality is raised to the level of a fundamental principle of nature decreeing that there be no special significance in either our location or in anything else associated with our existence The author argues that our non centrality on the cosmic stage is not the result of such a basic principle of nature but is actually the consequence of the fact that our very existence is dependent upon a finely tuned convergence of many different factors a convergence which cannot occur in the centres of either the Solar System or Galaxy In short our position away from the centre does not reflect a principle of nature decreeing that our place in the scheme of things be a lowly one On the contrary it is a simple consequence of the fact that central regions of solar systems and galaxies are not places where life with our degree of complexity can survive At a more fundamental level it is argued that the Copernican Principle in its formulation as a basic principle of nature actually makes predictions which are in conflict with observational evidence The most serious conflict concerns the nature of the Universe at large If the Copernican Principle is truly fundamental it must be capable of being generalized such that no place in either space or time is given any special significance This so called Perfect Cosmological Principle a logical consequence of the Copernican Principle predicts an eternal and infinite Steady State universe in strong conflict with observational evidence The question as to whether the earths position is in any way significant or special is to be examined within an observational context not by appeal to a supposed natural principle decreeing that our place necessarily be without special significance The author presents evidence supporting the contention that the earths place in the cosmos is indeed special not in the sense of being central but in the sense of being a highly unusual safe zone where advanced life can live and thrive The zone is rendered safe because of a highly improbable convergence of many factors relating to the nature of our planet itself the unusual nature of the moon the wider Solar System the sun and its unusual position within the Galaxy and even the Galaxy and its position in relation to similar nearby systems Advanced life on earth exists on a razors edge but is maintained in this exquisitely delicate balance by a just right convergence of factors The author terms this the Goldilocks Principle the principle stating that for complex life to exist conditions must be just right must be confined to a very narrow zone and that this zone be maintained by a highly improbable convergence of a variety of factors Some of the more important of these factors are discussed demonstrating just how finely balanced the conditions must be to allow life at our level of complexity to exist Such a delicate balance must of necessity appear to exhibit purposeful design But is this appearance real It is argued that the appearance is indeed genuine The argument that if enough monkeys play with enough computer keyboards for a sufficient length of time something intelligible i e something having the appearance of design will emerge is debunked It is argued that if an apparent product of design actually fulfils the purpose for which it appears to have been designed the only rational answer is to accept the design as real Monkeys playing with keyboards may just possibly prod

**Literacy in Teacher Preparation and Practice** Patrick

M. Jenlink, 2022-04-01 Today the meaning of literacy what it means to be literate has shifted dramatically Literacy involves more than a set of conventions to be learned either through print or technological formats Rather literacy enables people to negotiate meaning The past decade has witnessed increased attention on multiple literacies and modalities of learning associated with teacher preparation and practice Research recognizes both the increasing cultural and linguistic diversity in the new globalized society and the new variety of text forms from multiple communicative technologies There is also the need for new skills to operate successfully in the changing literate and increasingly diversified social environment Linguists anthropologists educators and social theorists no longer believe that literacy can be defined as a concrete list of skills that people merely manipulate and use Rather they argue that becoming literate is about what people do with literacy the values people place on various acts and their associated ideologies In other words literacy is more than linguistic it is political and social practice that limits or creates possibilities for who people become as literate beings Such understandings of literacy have informed and continue to inform our work with teachers who take a sociological or critical perspective toward literacy instruction Importantly as research indicates the disciplines pose specialized and unique literacy demands Disciplinary literacy refers to the idea that we should teach the specialized ways of reading understanding and thinking used in each academic discipline such as science mathematics engineering history or literature Each field has its own ways of using text to create and communicate meaning Accordingly as children advance through school literacy instruction should shift from general literacy strategies to the more specific or specialized ones from each discipline Teacher preparation programs emphasizing different disciplinary literacies acknowledge that old approaches to literacy are no longer sufficient Literacy in Teacher Preparation and Practice Enabling Individuals to Negotiate Meaning introduces the reader to a collection of thoughtful research based works by authors that represent current thinking about literacy across disciplines and the preparation of teachers to enter classrooms Each chapter focuses on teaching guided by literacies across disciplines and the preparation of teachers who will enter classrooms to instruct the next generation of students
