Treatment Strategies in Child and Adolescent

Psychiatry H.B. Ferguson, J.G. Simeon, 2013-06-29 It is clear that child and adolescent psychiatric disorders impose a heavy burden of suffering Recent large scale community epidemiological studies suggest that as many as 20% of children and adolescents in the general population may have clinically important mental disorders These disorders are accompanied by associated impairments in various domains of the child s life resulting in lowered life quality for the child and his or her family In addition for some conditions the onset of the disorder in childhood heralds a lifetime of serious psychosocial disturbance for a significant subgroup of affected children For instance about 40% of children seen in clinic settings with conduct disorder in late childhood and early adolescence will have serious psychiatric disorders in adult life Finally the heavy burden of suffering of these conditions is indicated by the large amounts of both human and financial resources devoted to their assessment and treatment There is a pressing need in the field for effective treatments that is those that have been shown to do more good than harm that will result in a significant reduction in the burden of suffering resulting from these disorders Further these effective interventions must be readily available and acceptable to clinicians in the settings in which children with mental disorders and their families seek care This book addresses an important need in the treatment field

Handbook of Prevention Barry A. Edelstein, Larry Michelson, 2012-12-06 Americans are healing themselves Heckler 1985 and prevention has taken root McGinnis 1985a We are altering our lifestyle to reduce physical and mental health risks Perhaps as important is the fact that the science of prevention is beginning to catch up with the practices of prevention although some might argue that the popularity of these practices far outstrips sound theoretical and empirical foundations The chapter authors in this volume examine the theoretical and empirical foundations of many current prevention practices and where data exist discuss the status of prevention efforts Where substantial prevention is not yet on the horizon the authors attempt to point us in the right direction or at least share with the reader some of the risk factors that should be addressed in our research We hope that readers will be stimulated to discuss the issues raised advance the current research and where possible adopt the prevention and health promotion strategies that are supported by sound theoretical and empirical work This volume can in no way be comprehensive with respect to the current work in prevention however we hope that we have provided a sampling of prevention activities and issues that appear together in one volume for perhaps the first time The primary intent of this volume is modest and the reader should not attempt to find continuity among the various chapters The only binding among these contributions is their focus on prevention
