

## What is Task Cycle and How to View in Orangescrum?

Time metrics are a set of performance indicators used to measure and evaluate the efficiency and effectiveness of an organization's time management. These metrics are crucial in providing insights into how much time is being spent on particular activities and projects, and how efficiently this time is being utilized.

Effective time management is a critical component of achieving organizational success, and time metrics can help identify areas where time is being wasted or not being used to its full potential. By tracking time metrics, organizations can improve their productivity, reduce costs, and optimize their resources.

Some common time metrics include cycle time, lead time, task duration, time to market, and time to resolution. Each of these metrics has its unique purpose and can help organizations measure different aspects of their operations.

Overall, time metrics are essential tools that can help organizations improve their time management practices and achieve their strategic goals. By tracking and analyzing these metrics regularly, organizations can identify areas for improvement and make data-driven decisions to optimize their time management practices.

There are several types of time metrics used in project management, and some of the most common ones are:

**Task Cycle:** The amount of time it takes to complete a single cycle of a specific task or process, from start to finish including the time it took in each status or stages of project development. It is used to identify bottlenecks and optimize processes to reduce cycle time.

**Lead Time:** The time it takes to complete a task or project from the moment it is requested to the moment it is delivered. It measures the entire time required to complete a task, including any waiting time.

**Task Duration:** The time it takes to complete a specific task, from start to finish. This metric is used to monitor task progress and identify potential delays.

**Time to Market:** The amount of time it takes to bring a product or service to the market, from idea generation to launch. It measures the efficiency of the product development process.

**Time to Resolution:** The time it takes to resolve a problem or issue, from the moment it is reported to the moment it is resolved. It is used to monitor service levels and identify areas for improvement.

**Handbook of Scheduling** Joseph Y-T. Leung, 2004-04-27 Researchers in management industrial engineering operations and computer science have intensely studied scheduling for more than 50 years resulting in an astounding body of knowledge in this field Handbook of Scheduling Algorithms Models and Performance Analysis the first handbook on scheduling provides full coverage of the most recent and advanced topics on the subject It assembles researchers from all relevant disciplines in order to facilitate cross fertilization and create new scheduling insights The book comprises six major parts each of which breaks down into smaller chapters Part I introduces materials and notation with tutorials on complexity theory and algorithms for the minimization of makespan total completion time dual objectives maximum lateness the number of late jobs and total tardiness Part II is devoted to classical scheduling problems Part III explores scheduling models that originate in computer science operations research and management science Part IV examines scheduling problems that arise in real time systems focusing on meeting hard deadline constraints while maximizing machine utilization Part V discusses stochastic scheduling and queueing networks highlighting jobs that are not deterministic Part VI covers applications discussing scheduling problems in airline process and transportation industries as well as in hospitals and educational institutions

**The End of Project Overruns** Robert M. Patty, Michael A. Denton, 2009-11 Applying the principles in this book unleashes ingenuity that achieves solidifies and perpetuates a new performance culture of mutual benefit In this culture project teams will prepare their work in task packages and enable workflow necessary to leave inefficiency of time and resource literally no place to hide Project examples will help teams implement the principles that shorten cycle times eliminate error improve quality and reduce costs to succeed in meeting project commitments Emerging Lean enterprise relationships between clients EPC contractors and their entire supply chain will advance what constitutes the new market differentiating performance of individuals project teams and companies justifying high levels of trust and inter organizational efforts to improve Client executives will learn to recognize root causes of risk and sources of excellence to mitigate them Well developed strategic improvement is often constrained because the traditional way current means and methods fit squarely in everyone's comfort zone By learning to ask the right questions top client leadership will soon render overruns from the best traditional systems as not good enough and strive for a new level of excellence EPC executives will better engage creative voices from their best resources and stakeholders to resolve all concerns and define a unified vision for how to deliver on clients expectations without overruns during capital project delivery Lean methods will effectively assure that vision principles and best expectations are understood and implemented at the workplace Department discipline and stakeholder leaders will align and no longer frustrate each other and their clients They will plan and execute with increased efficiency and effectiveness Cost reduction will accelerate retaining only client valued quality enabling a nimble response to market opportunities and threats Project and program managers will confidently accept intense market induced cost and

schedule reduction efforts They will apply new metrics measure potential and extract align and pilot improvements They will make workforce progress transparent to simplify resource balancing full utilization and workforce flow during all project phases The results will differentiate team members and their project s performance on the world stage Project professionals and the skilled labor force will gain confidence to make and keep increasingly difficult commitments and experience thereby increasing opportunity in an organization known for excellence They will fully engage heart and mind for leaders who expect excellence and they trust to enable and reward best practice performance while they jointly eliminate root causes of problems before they happen This book guides readers through each essential role for the transformation to Lean not just at the lowest levels but of the entire business model and all the supporting processes Resulting market recognition of sustained excellence of people their systems and they way they work together will create a market leading force **Pioneering**
