Public Acceptability of Congestion Charging in China Qiyang Liu, 2022-03-16 This book explores the public acceptability of congestion pricing in the Chinese context Successful in western cities notably London congestion pricing has overcome vested interests to revitalize city centers and reduce pollution Given the radically different nature of China's culture and political system the author articulates why public acceptability should be an issue and how it will look in an authoritarian context Based on stakeholder interviews focus groups and an attitudinal survey this book will interest policymakers planners and scholars of transport governance *Probability Theory and Mathematical Statistics for Engineers* V. Block Designs: A Randomization Approach Tadeusz Calinski, Sanpei Kageyama, 2012-12-06 The book is composed of two volumes each consisting of five chapters In Volume I following some statistical motivation based on a randomization model a general theory of the analysis of experiments in block designs has been developed In the present Volume II the primary aim is to present methods of that satisfy the statistical requirements described in constructing block designs Volume I particularly those considered in Chapters 3 and 4 and also to give some catalogues of plans of the designs Thus the constructional aspects are of predominant interest in Volume II with a general consideration given in Chapter 6 The main design investigations are systematized by separating the material into two contents depending on whether the designs provide unit efficiency factors for some contrasts of treatment parameters Chapter 7 or not Chapter 8 This distinction in classifying block designs may be essential from a practical point of view In general classification of block designs whether proper or not is based here on efficiency balance EB in the sense of the new terminology proposed in Section 4.4 see in particular Definition 4.4.2 Most of the attention is given to connected proper designs because of their statistical advantages as described in Volume I particularly in Chapter 3 When all contrasts are of equal importance either the class of $v \times 1 \times 0$ OEB designs i.e.

El-Hi Textbooks & Serials in Print, 2003, 2003 **Rate-Quality Optimized Video Coding** Yoo-Sok Saw, 2012-12-06 Rate Quality Optimized Video Coding discusses the matter of optimizing or negotiating the data rate of compressed digital video and its quality which has been a relatively neglected topic in either side of image video coding and tele traffic management Video rate management becomes a technically challenging task since it is required to maintain a certain video quality regardless of the availability of transmission or storage media This is caused by the broadband nature of digital video and inherent algorithmic features of mainstream video compression schemes e.g. H.261, H.263 and MPEG series In order to maximize the media utilization and to enhance video quality the data rate of compressed video should be regulated within a budget of available media resources while maintaining the video quality as high as possible In Part I Chapters 1 to 4 the non stationarity of digital video is discussed Since the non stationary nature is also inherited from algorithmic properties of international video coding standards which are a combination of statistical coding techniques the video rate management techniques of these standards are explored Although there is a series of known video rate control techniques such as picture rate variation frame dropping etc these techniques do not view the matter as an optimization

between rate and quality From the view of rate quality optimization the quantizer is the sole means of controlling rate and quality Thus quantizers and quantizer control techniques are analyzed based on the relationship of rate and quality In Part II Chapters 5 and 6 as a coherent approach to non stationary video established but still thriving nonlinear techniques are applied to video rate quality optimization such as artificial neural networks including radical basis function networks and fuzzy logic based schemes Conventional linear techniques are also described before the nonlinear techniques are explored By using these nonlinear techniques it is shown how they influence and tackle the rate quality optimization problem Finally in Chapter 7 rate quality optimization issues are reviewed in emerging video communication applications such as video transcoding and mobile video This chapter discusses some new issues and prospects of rate and quality control in those technology areas Rate Quality Optimized Video Coding is an excellent reference and can be used for advanced courses on the topic
