Muhlhausen, 2013-04-09 Addressing an issue of burning interest to every taxpayer, a Heritage Foundation scholar brings objective analysis to bear as he responds to the important and provocative question posed by his book's title. Of course, the answer to that question will also help determine whether the American public should fear budget cuts to federal social programs. Readers say, says author David B. Muhlhausen, can rest easy. As his book decisively demonstrates, scientifically rigorous national studies almost unanimously find that the federal government fails to solve social problems. To prove his point, Muhlhausen reports on large-scale evaluations of social programs for children, families, and workers, some advocated by Democrats, some by Republicans. But it isn't just the results that matter. It's the lesson to readers on how Americans can and should accurately assess government programs that cost hundreds of billions of dollars each year. At the book's core is an insistence that we move beyond anecdotal reasoning and often partisan opinion to measure the effectiveness of social programs using objective analysis and scientific methods. At the very least, the results of such analysis will, like this book, provide a sound basis for much needed

Constructing Science Deena Skolnick Weisberg, David M. Sobel, 2022-09-20 An examination of children's causal reasoning capacities and how those capacities serve as the foundation of their scientific thinking Young children have remarkable capacities for causal reasoning which are part of the foundation of their scientific thinking abilities In Constructing Science Deena Weisberg and David Sobel trace the ways that young children's sophisticated causal reasoning abilities combine with other cognitive metacognitive and social factors to develop into a more mature set of scientific thinking abilities Conceptualizing scientific thinking as the suite of skills that allows people to generate hypotheses solve problems and explain aspects of the world Weisberg and Sobel argue that understanding how this capacity develops can offer insights into how we can become a more scientifically literate society Investigating the development of causal reasoning and how it sets the stage for scientific thinking in the elementary school years and beyond Weisberg and Sobel outline a framework for understanding how children represent and learn causal knowledge and identify key variables that differ between causal reasoning and scientific thinking They present empirical studies suggesting ways to bridge the gap between causal reasoning and scientific thinking focusing on two factors contextualization and metacognitive thinking abilities Finally they examine children's explicit understanding of such concepts as science learning play and teaching Developing Performance-Based Assessments, Grades K-5 Nancy P. Gallavan, 2009 Use PBAs to design learning experiences that increase student engagement and achievement This book explains performance based assessments PBAs in easy to understand terms and describes how to construct PBAs that measure learner performance effectively while allowing educators to align curriculum and instruction with students needs Using PBAs teachers can engage students in the learning process connect the learning to students individual lives and monitor learning outcomes The author provides Detailed and clear examples of

performance based assessments Tools for assessment and guidelines for creating and using rubrics Checklists frequently asked questions graphic organizers and activities to reinforce the content in each chapter Handbook of Orthography and Literacy R. Malatesha Joshi, P.G. Aaron, 2013-05-13 Until about two decades ago the study of writing systems and their relationship to literacy acquisition was sparse and generally modeled after studies of English language learners This situation is now changing As the worldwide demand for literacy continues to grow researchers from different countries with different language backgrounds have begun examining the connection between their writing systems and literacy acquisition This text which derives from a NATO sponsored conference on orthography and literacy brings together the research of 70 scholars from across the world the largest assemblage of such experts to date Their findings are grouped into three parts as follows Part I Literacy Acquisition in Different Writing Systems describes the relationship between orthography and literacy in twenty five orthographic systems This section serves as a handy reference source for understanding the orthographies of languages as diverse as Arabic Chinese English Icelandic Kannada and Kishwahili Part II Literacy Acquisition From a Cross Linguistic Perspective makes direct comparisons of literacy acquisition in English and other orthographic systems The overall conclusion that emerges from these eight chapters is that the depth of an orthographic system does influence literacy acquisition primarily by slowing down the acquisition of reading skills Even so studies show that dyslexic readers can be found across all orthographic systems whether shallow or deep which shows that dyslexia also has internal cognitive and biological components Part III Literacy Acquisition Instructional Perspectives explores literacy acquisition from developmental and instructional perspectives and ends with a look into the future of literacy research This Handbook is appropriate for scholars researchers and graduate students in such diverse fields as cognitive psychology psycholinguistics literacy education English as a second language and communication disorders Learning to Spell Charles A. Perfetti, Laurence Rieben, Michel Fayol, 1997-08-01 This distinctive cross linguistic examination of spelling examines the cognitive processes that underlie spelling and the process of learning how to spell The chapters report and summarize recent research in English German Hebrew and French Framing the specific research on spelling are chapters that place spelling in broad theoretical perspectives provided by cognitive neuroscience psycholinguistic and writing system linguistic frameworks Of special interest is the focus on two major interrelated issues how spelling is acquired and the relationship between reading and spelling An important dimension of the book is the interweaving of these basic questions about the nature of spelling with practical questions about how children learn to spell in classrooms A motivating factor in this work was to demonstrate that spelling research has become a central challenging topic in the study of cognitive processes rather than an isolated skill learned in school It thus brings together schooling and learning issues with modern cognitive research in a unique way testing children writing strings of letters as a teacher pronounces words ever so clearly In parts of the United States it can also bring an image of specialized wizardry and school room competition the spelling bee And for countless

adults who confess with self deprecation to being terrible spellers it is a reminder of a mysterious but minor affliction that the fates have visited on them Beneath these popular images spelling is a human literacy ability that reflects language and nonlanguage cognitive processes This collection of papers presents a sample of contemporary research across different languages that addresses this ability To understand spelling as an interesting scientific problem there are several important perspectives First spelling is the use of conventionalized writing systems that encode languages A second asks how children learn to spell Finally from a literacy point of view another asks the extent to which spelling and reading are related In collecting some of the interesting research on spelling the editors have adopted each of these perspectives Many of the papers themselves reflect more than one perspective and the reader will find important observations about orthographies the relationship between spelling and reading and issues of learning and teaching throughout the collection
