A First Course in Ordinary Differential Equations Suman Kumar Tumuluri,2021-03-24 A First course in Ordinary Differential Equations provides a detailed introduction to the subject focusing on analytical methods to solve ODEs and theoretical aspects of analyzing them when it is difficult not possible to find their solutions explicitly This two fold treatment of the subject is quite handy not only for undergraduate students in mathematics but also for physicists engineers who are interested in understanding how various methods to solve ODEs work More than 300 end of chapter problems with varying difficulty are provided so that the reader can self examine their understanding of the topics covered in the text Most of the definitions and results used from subjects like real analysis linear algebra are stated clearly in the book This enables the book to be accessible to physics and engineering students also Moreover sufficient number of worked out examples are presented to illustrate every new technique introduced in this book Moreover the author elucidates the importance of various hypotheses in the results by

providing counter examples Features Offers comprehensive coverage of all essential topics required for an introductory course in ODE Emphasizes on both computation of solutions to ODEs as well as the theoretical concepts like well posedness comparison results stability etc Systematic presentation of insights of the nature of the solutions to linear non linear ODEs Special attention on the study of asymptotic behavior of solutions to autonomous ODEs both for scalar case and 2 2 systems Sufficient number of examples are provided wherever a notion is introduced Contains a rich collection of problems This book serves as a text book for undergraduate students and a reference book for scientists and engineers Broad coverage and clear presentation of the material indeed appeals to the readers Dr Suman K Tumuluri has been working in University of Hyderabad India for 11 years and at present he is an associate professor His research interests include applications of partial differential equations in population dynamics and fluid dynamics
