

## USING PROBABILITY

**Probability** is the possibility that a certain event will occur.

Probability is the chance of an event occurring divided by the total number of possible outcomes. Probability is based on whether events are dependent or independent of each other.

- An **independent event** refers to the outcome of one event not affecting the outcome of another event.
- A **dependent event** is when the outcome of one event does affect the outcome of the other event.

The number of ways that an event can happen depends on the order.

- A **permutation** is an arrangement of objects in which order matters.
- A **combination** is a set of objects in which order does not matter.

Just as probability refers to the possibility of an event happening, **odds** refer to the odds **against an event happening**.

### How to use probability

The **probability** of one event occurring is equal to the chance of the event occurring divided by the total outcomes. Probabilities of independent or dependent events are based on how one event affects the other event, if at all.

- For example, if there are 10 marbles in a bag with 4 blue and 6 red marbles, the probability of picking a red marble, putting it back and then picking another red marble is  $6/10 \cdot 6/10 = 36/100$  or  $9/25$ . This probability is **independent** because what happened the first time does not affect what happens the second time. This can be shown by the term "with replacement", which means that the first item has been replaced.

The probability of picking a red marble and then another red marble without replacing the first is  $6/10 \cdot 5/9 = 30/90$  or  $1/3$ . This probability is **dependent** because the first event affects the second event.
