Polymerase Chain Reaction

Synopsis

In this Polymerase Chain Reaction (PCR) simulation, you will see through eight steps another reaction, similar to the one that takes place, to investigate the crime, understand how DNA is the perfect model evidence in the field that the investigator has left traces of their past.

Design the test

After sampling, you will go to the next laboratory to investigate the sample of DNA you collected. By using a mixture of thermocycling, you can amplify the DNA from the crime scene. It is up to you to make the correct samples accordingly the PCR equipment.

See the structure of DNA inside replication of DNA

In the simulation, you will see the DNA replication on the computer lab, illustrating the structure of DNA and the replication cycle including all the correct information the experimental process, as well as all specifications of the test itself.

Identify the samples

In the PCR simulation, you will collect your samples and other correct samples from the laboratory and you will make compare the polymerase chain reaction with the other samples the structure.

Learning Objectives

In this part of this simulation, you will see reports:

1. Identify the function of each particular machine equipment and equipment.
2. Explain in this simulation using the results of the test results on the simulation.
