Power Electronics, A First Course Ned Mohan, Siddharth Raju, 2023-01-12 POWER ELECTRONICS A FIRST COURSE Enables students to understand power electronics systems as one course in an integrated electric energy systems curriculum. Power Electronics A First Course provides instruction on fundamental concepts related to power electronics to undergraduate electrical engineering students beginning with an introductory chapter and moving on to discussing topics such as switching power poles, switch mode dc/dc converters and feedback controllers. The authors also cover diode rectifiers, power factor correction (PFC) circuits and switch mode dc power supplies. Later chapters touch on soft switching in dc/dc power converters, voltage and current requirements imposed by various power applications, dc and low frequency sinusoidal ac voltages, thyristor converters and the utility applications of harnessing energy from renewable sources. Power Electronics A First Course is the only textbook that is integrated with hardware experiments and simulation results. The simulation files are available on a website associated with this textbook. The hardware experiments will be available through a University of Minnesota startup at a low cost. In Power Electronics A First Course, readers can expect to find detailed information on availability of various power semiconductor devices that are essential in power electronic systems plus their switching characteristics and various tradeoffs. Common foundational unit of various converters and their operation plus fundamental concepts for feedback control illustrated by means of regulated dc/dc converters. Basic concepts associated with magnetic circuits to develop an understanding of inductors and transformers needed in power electronics. Problems associated with hard switching and some of the practical circuits where this problem can be minimized with soft switching.
