- What is genetic drift?
- What is the Hardy–Weinberg principle?

Natural Selection on Single-Gene Traits (pages 397–398)

1. Is the following sentence true or false? Natural selection on single-gene traits cannot lead to changes in allele frequencies. _____
2. If a trait made an organism less likely to survive and reproduce, what would happen to the allele for that trait? _____

3. If a trait had no effect on an organism's fitness, what would happen to the allele for that trait? _____

Natural Selection on Polygenic Traits (pages 398–399)

4. List the three ways that natural selection can affect the distributions of phenotypes.
 - a. _____
 - b. _____
 - c. _____

Match the type of selection with the situation in which it occurs.

Type of Selection	Situation
_____ 5. Directional	a. Individuals at the upper and lower ends of the curve have higher fitness than individuals near the middle.
_____ 6. Stabilizing	b. Individuals at one end of the curve have higher fitness than individuals in the middle or at the other end.
_____ 7. Disruptive	c. Individuals near the center of the curve have higher fitness than individuals at either end.

Introduction to Genetics A Molecular Approach is a new textbook for first and second year undergraduates It first presents molecular structures and mechanisms before introducing the more challenging concepts and terminology associated with transmission genetics Self-Organizing Systems F. Eugene Yates, 2012-12-06 Technological systems become organized by commands from outside as when human intentions lead to the building of structures or machines But many natural systems become structured by their own internal processes these are the self organizing systems and the emergence of order within them is a complex phenomenon that intrigues scientists from all disciplines Unfortunately complexity is ill defined Global explanatory constructs such as cybernetics or general systems theory which were intended to cope with complexity produced instead a grandiosity that has now mercifully run its course and died Most of us have become wary of proposals for an integrated systems approach to complex matters yet we must come to grips with complexity somehow Now is a good time to reexamine complex systems to determine whether or not various scientific specialties can discover common principles or properties in them If they do then a fresh multidisciplinary attack on the difficulties would be a valid scientific task Believing that complexity is a proper scientific issue and that self organizing systems are the foremost example R Tomovic Z Damjanovic and I arranged a conference August 26 September 1 1979 in Dubrovnik Yugoslavia to address self organizing

systems We invited 30 participants from seven countries Included were biologists geologists physicists chemists mathematicians bio physicists and control engineers Participants were asked not to bring manuscripts but rather to present positions on an assigned topic Any writing would be done after the conference when the writers could benefit from their experiences there
