Paul F. Hudson, 2021-11-25 Pressure on large fluvial lowlands has increased tremendously during the past twenty years because of flood control urbanization and increased dependence upon floodplains and deltas for food production This book examines human impacts on lowland rivers and discusses how these changes affect different types of riverine environments and flood processes Surveying a global range of large rivers it provides a primary focus on the lower Rhine River in the Netherlands and the Lower Mississippi River in Louisiana A particular focus of the book is on geo engineering which is described in a straight forward writing style that is accessible to a broad audience of advanced students researchers and practitioners in global environmental change fluvial geomorphology and sedimentology and flood and water management

The Water Will Come Jeff Goodell, 2017-10-24 What if Atlantis wasn't a myth but an early precursor to a new age of great flooding Across the globe scientists and civilians alike are noticing rapidly rising sea levels and higher and higher tides pushing more water directly into the places we live from our most vibrant historic cities to our last remaining traditional coastal villages With each crack in the great ice sheets of the Arctic and Antarctica and each tick upwards of Earth's thermometer we are moving closer to the brink of broad disaster By century's end hundreds of millions of people will be retreating from the world's shores as our coasts become inundated and our landscapes transformed From island nations to the world's major cities coastal regions will disappear Engineering projects to hold back the water are bold and may buy some time Yet despite international efforts and tireless research there is no permanent solution no barriers to erect or walls to build that will protect us in the end from the drowning of the world as we know it The Water Will Come is the definitive account of the coming water why and how this will happen and what it will all mean As he travels across twelve countries and reports from the front lines acclaimed journalist Jeff Goodell employs fact science and first person on the ground journalism to show vivid scenes from what already is becoming a water world An immersive mildly gonzo and depressingly well timed book about the drenching effects of global warming and a powerful reminder that we can bury our heads in the sand about climate change for only so long before the sand itself disappears Jennifer Senior New York Times **Opportunities for**

Environmentally Healthy, Inclusive, and Resilient Growth in Mexico's Yucatán Peninsula Ernesto

Sánchez-Triana, Jack Ruitenbeek, Santiago Enriquez, Katharina Siegmann, 2019-12-30 Approximately 4.1 million people live in the three states of the Yucatán Peninsula: Quintana Roo, Yucatán, and Campeche. Some 30 municipalities are in a coastal territory of almost 2,000 linear kilometers from the oil fields of the Gulf of Mexico to the world-renowned beaches of Cancún just north of the second largest barrier reef in the world. The peninsula's natural assets also include notable Mayan temples. With poverty far from eliminated and with economic development opportunities beckoning in agriculture, manufacturing, and hydrocarbon development, the region is under growing risks from environmental hazards. Oil spills, hurricanes, coral bleaching, extreme flooding, and erosion have all been experienced in this region over the past decade. Based on preliminary identification of environmental priorities, Opportunities for Environmentally Healthy, Inclusive, and Resilient Growth in Mexico's Yucatán Peninsula explores selected topics that aim to inform decision making in the region. A general context of integrated coastal zone management is used to explore issues, constraints, and potential solutions, and the role of geomorphology is examined with a view to identifying how shore management plans can contribute to improved coastal management. Economic studies find that the main environmental health risks in the peninsula result in more than 1,000 premature deaths every year and in more than 93.6 million days lost to illnesses. These risks generate substantial economic losses representing 2.23 percent of gross regional income. Scenarios relating to the economic cost of extreme weather events generate similar levels of damages: 1.415 percent of GDP in 2020 and 1.623 percent of GDP in 2050. A social accounting matrix examines the social and environmental interconnectedness to the various parts of the economy, and an institutional analysis considers the mandates of existing institutions in the states and of the contribution that regulatory measures may make to environmentally sustainable development without undermining economic growth prospects. *Proceedings of the 2013 International Conference on Material Science and Environmental Engineering-2013* Dr. Qingzhou Xu, 2013-09-05 MSE2013 will provide an excellent international academic forum for sharing knowledge and results in theory, methodology, and applications on material science and environmental engineering.
