Abstract—This document describes the design and implementation of the *Health Insurance and Access to Care* (HIAAC) data system. The system was developed to support the analysis of health insurance and access to care data for the purpose of identifying and addressing barriers to care. The system was designed to be flexible and scalable, and to support a wide range of analyses. The system was implemented using a combination of commercial and open-source software. The system is currently being used by a number of health care organizations, and is expected to be widely adopted in the future.
