California Algebra 1 , 2009 **California Algebra 2** , 2008 **Intermediate Mathematics: Book II** Farhad
Ghassemi Tari, Ph.D., 2024-06-05 Farhad Ghassemi Tari was born in Tehran Iran He currently resides in Oxnard California
The author completed his Ph D program in Operations Research applied mathematical programming and graduated from
Texas A M University in 1980 Right after his graduation he started teaching at Sharif University of Technology for thirty six
years where he retired as an associate professor During this time he conducted research projects and taught several
undergraduate and graduate courses mostly in mathematical programming such as Linear Programming Integer and
Dynamic Programming Nonlinear Programming Sequencing and Scheduling and Quantitative Method in Managerial Decision
Making Tari has published more than eighty papers in scientific journals and has held conference proceedings from the
research results His hobbies include reading books and listening to classical music He also likes cooking Mathematics I and
its complement volume Intermediate Mathematics II systematically describe concepts and tools that are crucial to every
college student who are willing to attain solid base for more advance mathematical topics They aim to give the reader a
comprehensive view of mathematics its use and its role in computation These two books cooperatively may be different than
other mathematics textbooks Every chapter starts with a romantic poem Researchers have discovered that contemplating
poetic imagery and the multiple layers of meanings in poems activates specific areas of the brain that help us to interpret our
everyday reality In these books every topic is assisted by several examples After presentation of concepts and tools each
chapter is proceeded with different real life applications of the topics Finally each chapter concludes with 60 multiple choice
questions to attract deeper learning and understanding of the topics studied *Book Catalog of the Library and Information

Shahriari, 2006 Is there always a prime number between n and $2n$ Where approximately is the millionth prime And just what
does calculus have to do with answering either of these questions It turns out that calculus has a lot to do with both

questions as this book can show you The theme of the book is approximations Calculus is a powerful tool because it allows us to approximate complicated functions with simpler ones Indeed replacing a function locally with a linear or higher order approximation is at the heart of calculus The real star of the book though is the task of approximating the number of primes up to a number x This leads to the famous Prime Number Theorem and to the answers to the two questions about primes While emphasizing the role of approximations in calculus most major topics are addressed such as derivatives integrals the Fundamental Theorem of Calculus sequences series and so on However our particular point of view also leads us to many unusual topics curvature Pade approximations public key cryptography and an analysis of the logistic equation to name a few The reader takes an active role in developing the material by solving problems Most topics are broken down into a series of manageable problems which guide you to an understanding of the important ideas There is also ample exposition to fill in background material and to get you thinking appropriately about the concepts Approximately Calculus is intended for the reader who has already had an introduction to calculus but wants to engage the concepts and ideas at a deeper level It is suitable as a text for an honors or alternative second semester calculus course
