Gabbay,Odinaldo T. Rodrigues,Alessandra Russo,2010-08-03 An important aspect in the formalisation of common sense reasoning is the construction of a model of what an agent believes the world to be like to help in her reasoning process This model is often incomplete or inaccurate but new information can be used to refine it The study of techniques that achieve this in a rational way is the task of the discipline of belief revision with which this book is concerned There are three key elements to the book s approach Firstly the methodology of logic by translation A specific instance of this is the idea of revision by translation Revision for a foreign logic is done via its translation into a well known logic usually classic logic Secondly the technique of meta level object level movement where we bring some operation defined at the meta level of a logic into its object level In this book we bring the operation of deletion to the object level Finally through Labelled Deductive Systems we use the context of the revision to finetune its operation and illustrate the idea through the presentation of various algorithms The book is suitable for

researchers and postgraduates in the areas of artificial intelligence database theory and logic
