

THE RETINA REFLEX III

THE RETINA REFLEX III is fitted with a 2-in. (50 mm.) Retina Xinar or Retina-Vue $f/2.8$ or a 2 in. (50 mm.) Retina-Xinar or Retina-Heligon $f/1.9$. The $f/2.8$ lenses are four-element triplets, the $f/1.9$ lenses have six elements of symmetrical four-component design. All have an angle of view of 47° and permit focusing from infinity down to 3 ft.

The complete lens is interchangeable against wide-angle and telephoto lenses. The built-in photo-electric exposure meter is directly coupled to the aperture setting. The meter needle is set in the viewfinder without taking the camera from the eye. The exposure meter needle is also visible in a window on top of the camera.

The extra-large eyepiece of the finder shows the entire picture on the ground glass when even when wearing spectacles or sunglasses.

A release key with safety button prevents unintentional exposures. The handy location of the key ensures particularly smooth release.

The built-in Synchro-Coupler shutter has cross-coupled shutter speed and aperture settings.

The $f/2.8$ lenses accept 12 mm. screw-in filters and close-up lenses. (12 mm. is the outside diameter). The lens hood is rectangular with a tubular bayonet fitting on the back to fit the bayonet mount surrounding the lens itself.

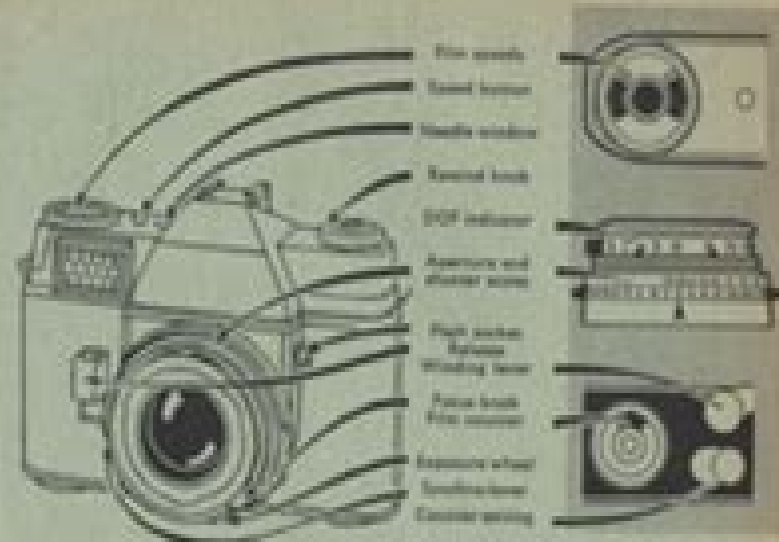

The $f/1.9$ lenses accept filters and close-up lenses of 40 mm. diameter. No lens hood is ordinarily required as the lens is deeply recessed in its mount.

OTHER ACCESSORIES include a close-up attachment, table stand, copying stand, 1:1 close-up stand, microscope adapter, and bracketizer.

Loading

1. Open the camera back.
2. Pull out the revolved knob.
3. Insert the film cassette.
4. Push back the revolved knob.
5. Pull out $3\frac{1}{2}$ in. of film.
6. Fix the film to the take-up spool.
7. Set the film counter by pushing the film counter setting button in the base of the camera (between transport lever and counter window) repeatedly in the direction of the arrow, until the diamond (♦) mark between 34 and 1 in the counter window is opposite the cut-out on the rim. If a 20 exposure film is used, set the diamond mark (♦) next to 23 to the cut-out. Pull out the rapid winding lever as far as it will go and let it fly back. Release the shutter. Repeat this until No. 34 (or No. 20 for a 20 exposure film) appears opposite the cut-out of the film counter.
8. Set the film indicator.
9. Set the film speed on the exposure meter. Depressing the button on

THE RETINA REFLEX III

The film counter on the film speed dial are set with the aid of the speed button and the exposure wheel. The meter needle is visible in the meter window on top of the camera, as well as through the viewfinder. The meter also incorporates a fluorescent indicator. The focusing knob moves the lens forward and backward and is coupled to the focus knob with the distance scale. An exposure scale of four exposures is coupled with the aperture control. The aperture and shutter speed scales are cross-coupled with each other, as well as being coupled with the meter needle via the exposure wheel. The film counter in the camera base counts exposures backwards, and can be reset by the counter setting button. The window here in the camera base advances the film and film counter, and also controls the other operations of the winding sequence.

Winding with the Retina Reflex III. From left to right: Wind the rapid winding lever; turn the exposure wheel to expose the meter needle between the two fixed prongs in the finder back; when the meter shows appropriate speed combination, focus the image in the finder; press the release for exposure.
