Building in Canada, 1943 [House Rating Schemes](#) Maria Kordjamshidi, 2010-11-25 House Rating Schemes provides information to students architects and researchers in the field of the built environment It reviews current House Rating Schemes HRS used in different countries

and investigates how these schemes assess the thermal performance of a house It challenges the way that these schemes assess building energy efficiency and their inability to evaluate free running buildings which do not need an energy load for heating and cooling indoor environments Finally the book proposes a new index and method for HRS in which the efficiency of a house design can be evaluated with reference to its thermal performance in both free running and conditioned operation modes The book deals with various approaches and methods for rating buildings on the basis of different indexes with implications for both energy efficiency and thermal comfort It also guides readers through a computer simulation program for developing a rating system that evaluates and ranks building energy efficiency
