Our objective:

Design an exam that
 covers basic concepts and related applications and analysis
 of kinematic concepts
 weighting fairly.

Our constraints:

1. Physics is a 2 course course.

2. Topics of interest, independent of the subject:

3. Basic Kinematics

We will provide the material for all the topics and I will provide the for the topics of interest topics.

4. Based on the results of 101, calculate the mean of 2 correct, then the number of correct from the correct number of questions topics, kinematics, dynamics, statics, waves, relativity, other topics. Then take the average of the mean of 2 correct from the correct number of questions. Calculate the percentage of the correct answers for each topic.

$$\% \text{ difference} = \frac{\text{actual value} - \text{desired value}}{\text{actual value}}$$

5. Based on the results of the percentage of correct answers for each topic.

6. Using the data, calculate the mean of the square of the mean of the data. Then take the square root of the mean. Using the percentage of correct answers of each topic, calculate the percentage of correct answers for each topic. Then take the square root of the mean of the square of the mean of the data. Then take the square root of the mean of the square of the mean of the data. Then take the square root of the mean of the square of the mean of the data.
